Board of Trustees
Iowa Peace Officers' Retirement, Accident
and Disability System
215 East 7th Street
Des Moines, IA 50319

Dear Members of the Board:

At your request, we have performed an actuarial valuation of the Iowa Peace Officers' Retirement, Accident and Disability System (POR) as of July 1, 2023. The purpose of this report is to provide a summary of the funded status of the System as of July 1, 2023 and determine the normal contribution rate as defined in Iowa Code Chapter 97A.8. There have been no changes to the plan provisions or actuarial methods since the prior valuation. However, due to the passage of Senate File 513 during the 2023 legislation session, designated peace officers in the Department of Transportation under section 321.477, Code 2023, who had fewer than 10 years of membership service and were transferred to the Department of Public Safety became members of POR. As a result, 28 employees whose retirement benefits were provided under the Iowa Public Employees Retirement System (IPERS) are now covered by POR. All years of service accrued under IPERS is transferred to POR for purposes of vesting and benefit calculations. In addition, IPERS is to transfer an amount equal to the accumulated contributions for each member along with a transfer of the accumulated employer contributions as defined in section 97B.53. An additional contribution from the State will be made once the POR actuary determines the remaining actuarial cost of the transfer. As a result, the bill had no impact on POR's funded status as of July 1, 2023.

The System is funded with fixed contribution rates for the members (11.40%) and the State (37.00%). In addition, the State makes a supplemental contribution of \$5.0 million which is payable until the funded ratio reaches 85%. This current funding policy is projected to result in the System's funded status remaining between 75% and 80% over the next 20 years if all actuarial assumptions, including a 6.50% investment return each year in the future. While the System is not projected to move to a funded ratio of 100%, there is not a projected depletion date and the System is expected to be able to pay all future benefits as they become due. However, there is risk to the System's funding if unfavorable experience occurs since the contributions coming into the System do not

adjust when actual experience is less favorable than assumed. In order to improve the System's funded ratio and move it to 100% over a reasonable period, additional contributions above the current level will be necessary. We are happy to assist in further analysis if there is interest in considering alternate funding policies.

In preparing our report, we relied, without audit, on information (some oral and some in writing) supplied by the System's staff. This information includes, but is not limited to, statutory provisions, member data and financial information. We found this information to be reasonably consistent and comparable with information provided in prior years. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete, our results may be different and our calculations may need to be revised.

We further certify that all costs, liabilities, rates of interest and other factors for the System have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the System and reasonable expectations); and which, in combination, offer our best estimate of anticipated experience affecting the System.

Nevertheless, the emerging costs will vary from those presented in this report to the extent actual experience differs from that projected by the actuarial assumptions. The Board of Trustees has the final decision regarding the appropriateness of the assumptions and adopted them as indicated in Appendix C.

In order to prepare the results in this report, we have utilized actuarial models that were developed to measure liabilities and develop actuarial costs. These models include tools that we have produced and tested, along with commercially available valuation software that we have reviewed to confirm the appropriateness and accuracy of the output. In utilizing these models, we develop and use input parameters and assumptions about future contingent events along with recognized actuarial approaches to develop the needed results. Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for the System. The calculations in the enclosed report have been made on a basis consistent with our understanding of the System's funding requirements and goals. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes. Actuarial computations for purposes of fulfilling financial accounting requirements for the System under Governmental Accounting Standards No. 67 and No. 68 are provided in a separate report.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

We respectfully submit the following report and look forward to discussing it with you.

SECTION 1 – EXECUTIVE SUMMARY

Purpose of the Report

This report presents the results of the July 1, 2023 actuarial valuation of the Iowa Peace Officers’ Retirement, Accident and Disability System (POR). The primary purposes of performing the valuation are as follows:

- to determine the normal contribution rate payable by the State under Chapter 97A.8(1)(b) of the Code of Iowa (referred to in this report as the “actuarial contribution rate”);
- to evaluate the sufficiency of the statutory contribution rates to fund the System over the long term;
- to satisfy the reporting requirements under Chapter 97 D.5 of the Code of Iowa;
- to assess and disclose the key risks associated with funding the System;
- to disclose asset and liability measures indicating the current funded status of the System as of the valuation date; and
- to analyze and report on trends in System contributions, assets, and liabilities over the past several years.

Due to the passage of Senate File 513 (SF 513) during the 2023 legislation session, designated peace officers in the Department of Transportation under section 321.477, Code 2023, who had fewer than 10 years of membership service and were transferred to the Department of Public Safety became members of POR. As a result, 28 employees whose retirement benefits were provided under the Iowa Public Employees Retirement System (IPERS) are now covered by POR. All years of service accrued under IPERS are transferred to POR for purposes of vesting and benefit calculations. In addition, IPERS is to transfer an amount equal to the accumulated contributions for each member along with a transfer of the accumulated employer contributions as defined in section 97B.53. An additional contribution from the State will be made once the POR actuary determines the remaining actuarial cost of the transfer. As a result, the bill had no impact on POR’s funded status as of July 1, 2023.

The liability for the 28 members who transferred into POR was \$3.8 million which was offset by a transfer from IPERS of \$0.9 million and an additional State contribution of \$2.9 million. Because the liability for these members is included in the July 1, 2023 valuation but the transfer from IPERS and the additional State contribution were not received before July 1, 2023, those amounts are shown as receivables in this funding valuation report. While the 28 members who transferred from IPERS did not impact the UAAL, their payroll is still reflected when calculating the actuarial contribution rate. As a result, the cost of amortizing the System’s UAAL is spread over a larger payroll, which resulted in a decrease in the actuarial contribution rate of 1.21% of pay.

The valuation results provide a “snapshot” view of the System’s financial condition on July 1, 2023. The unfunded actuarial accrued liability (UAAL) increased from \$184 million on July 1, 2022 to \$207 million on July 1, 2023, primarily due to unfavorable experience on both the System’s assets and actuarial liabilities.

SECTION 1 – EXECUTIVE SUMMARY

The key factors impacting the actuarial contribution rate from the last valuation include:

- The rate of return on the market value of assets for fiscal year 2023, as provided by the State Treasurer's office, was 9.9%. However, due to the use of an asset smoothing method, only part of the actuarial gain (return above the assumed 6.5% for FY 2023) for this year is recognized in the current valuation. Coupled with scheduled recognition of the current year's portion of deferred investment experience from prior years, the rate of return on the actuarial value of assets was 4.8%, lower than the expected return of 6.5%. This produced an actuarial loss that increased the UAAL by \$11.5 million and increased the actuarial contribution rate by 1.52% of pay. The market value of assets is now 6.9% lower than the actuarial (smoothed) value of assets, reflecting a net deferred investment loss.
- The total statutory contribution rate for fiscal year 2023 was lower than the actuarial contribution rate. This contribution shortfall resulted in an increase in the UAAL of \$3.7 million, which increased the actuarial contribution rate by 0.49% of pay.
- There was a net liability loss of \$11.6 million, primarily due to salary increases that were larger than expected, based on actuarial assumptions, and post-retirement escalator increases to retirees and beneficiaries which were larger than expected (also impacted by salary increases for active members). The liability experience increased the actuarial contribution rate by 1.52% of pay.

A more detailed discussion of actual experience is included later in this section of the report.

The experience of both the System's assets and liabilities impacts the System's funded status as well as the actuarial contribution rate. Experience that is more favorable than anticipated, based on actuarial assumptions, will generally lower the UAAL and the actuarial contribution rate, while experience that is less favorable than expected will generally increase the UAAL and the actuarial contribution rate.

The State's actuarial contribution rate increased from 54.05% in last year's valuation to 55.16% this year, given the member contribution rate of 11.40%. The State's actuarial contribution rate exceeds the State's fixed payroll-related contribution rate for FY 2024 of 37.00% by 18.16%. However, by statute the State is required to make supplemental contributions of \$5.0 million per year until the System is at least 85% funded. With the State's supplemental contribution for FY 2024, the contribution shortfall is reduced to 9.25%. The supplemental contribution of \$5.0 million is an important component of strengthening PORS' long-term funding as it represents an additional funding source of about 9% of payroll.

The net deferred investment loss of \$47 million will flow through the asset smoothing method over the next four years and is expected to decrease the funded status. However, the actual investment returns in the next few years will also impact the actuarial value of assets and the funded ratio.

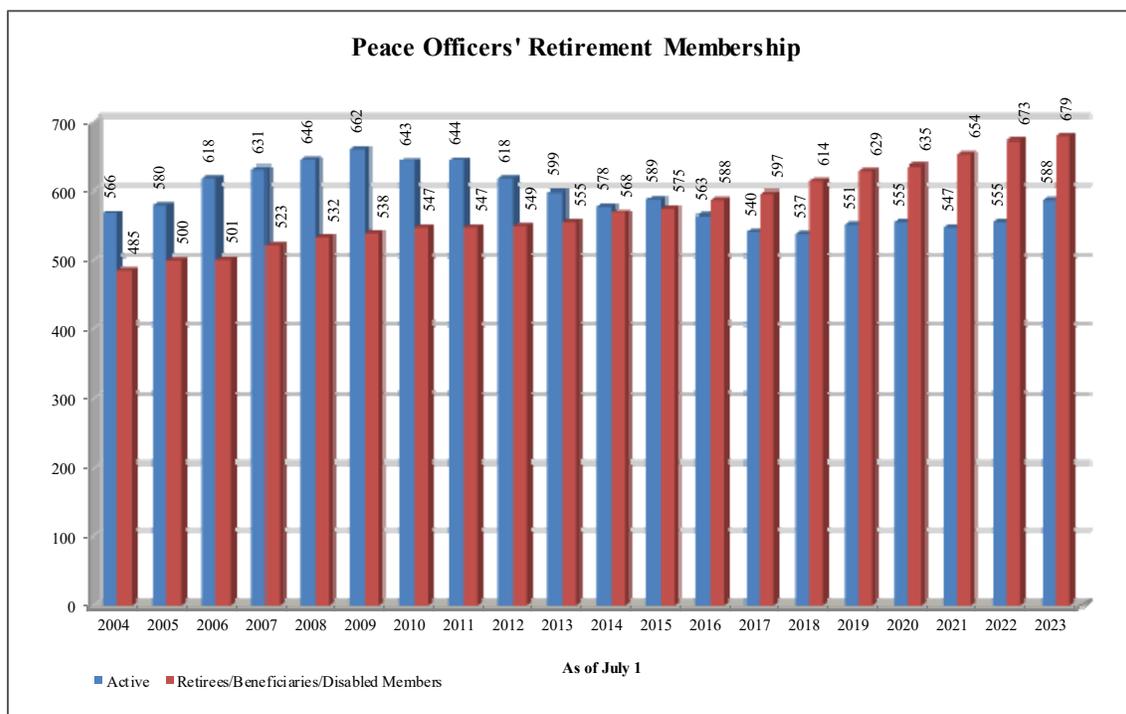

SECTION 1 – EXECUTIVE SUMMARY

Membership

Largely due to SF 513, the number of active members increased from 555 in the prior valuation to 588 in the current valuation, an increase of 5.9%. The increase in active membership, coupled with higher than assumed salary increases, resulted in an increase in the total covered payroll of POR of 10.8%, well above the expected increase of 2.75%. The higher active payroll than expected has a positive impact on the long-term funding of the System because the member and State fixed contribution rates will result in a higher dollar amount of contributions, paying down the UAAL more rapidly.

As the following graph indicates, the number of active members in the System has decreased about 9% since 2009. Over this period, the number of retirees has continually grown to the point where the number of retirees is larger than the number of actives. This is not necessarily problematic and, in fact, is a key reason for funding retirement systems in advance. Such growth in the number of retirees is expected and factored into the valuation process. However, this demographic characteristic can create a funding challenge because the volatility in investment returns has a greater impact on the actuarial contribution rate due to the size of plan assets compared to active member payroll. See Table 14 for more information.

SECTION 1 – EXECUTIVE SUMMARY

Assets

As of July 1, 2023, the System had total funds, on a market value basis, of \$680.5 million. This is an increase of \$55.4 million from last year’s market value of \$625.1 million. The market value of assets is not used directly in the calculation of the funded status or the actuarial contribution rate. The System uses an asset valuation method to smooth the effects of market fluctuations. The actuarial value of assets spreads the difference between the actual return and the expected return (based on the actuarial assumption) on the market value of assets evenly over five years. See Tables 3 and 4 for a detailed development of the actuarial value of assets. The components of the change in the asset values are shown in the following table:

	Market Value	Actuarial Value
Net Assets, July 1, 2022	\$625,063,131	\$700,657,990
· Member Contributions	5,990,767	5,990,767
· Employer Contributions	18,721,480	18,721,480
· Supplemental State Appropriations	5,000,000	5,000,000
· Benefit Payments	(38,776,612)	(38,776,612)
· Administrative Expenses	(348,694)	(348,694)
· Investment Income	61,940,422	33,698,800
· Contributions Receivable*	3,752,792	3,752,792
Net Assets, July 1, 2023	\$681,343,286	\$728,696,523

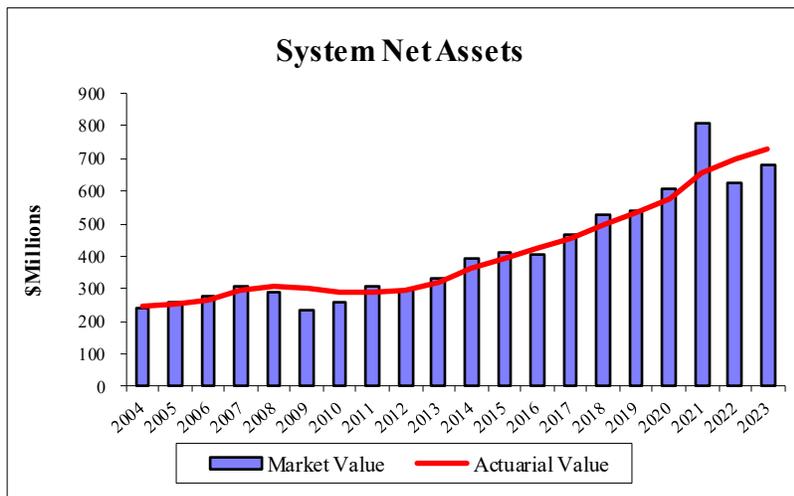

* Set equal to the increase in the System’s AAL due to the 28 employees transferred under SF 513.

The net rate of return on the market value of assets for FY 2023, as provided by the System, was 9.9%. Measured on the actuarial value of assets, the rate of return was 4.8% which resulted in an actuarial loss of \$11.5 million.

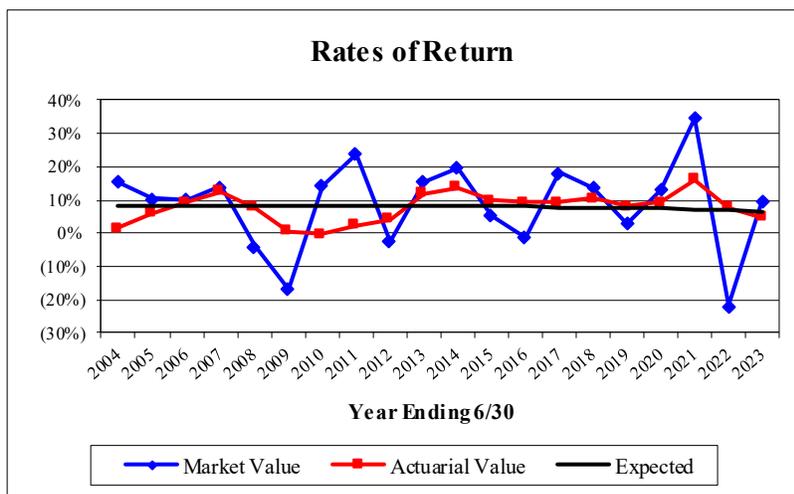

The market value of assets is currently \$47.4 million, or about 7%, lower than the actuarial value of assets. This net deferred asset loss will be recognized over the next four years, resulting in an increase in the actuarial contribution rate, unless offset by favorable experience in future years.

SECTION 1 – EXECUTIVE SUMMARY

During this period, the actuarial value of assets has been both above and below the market value of assets, which is expected when using an asset smoothing method.

Rates of return on the market value of assets have been extremely volatile, while the return on the actuarial value of assets has been more stable. This illustrates the advantage of using an asset smoothing method.

System Liabilities

The actuarial accrued liability is that portion of the present value of future benefits that will not be paid by future employer normal costs or member contributions. The difference between this liability and asset values at the same date is referred to as the unfunded actuarial accrued liability (UAAL). The UAAL will be reduced if the employer’s contributions exceed the employer’s normal cost for the year, after allowing for interest on the previous balance of the unfunded actuarial accrued liability. Benefit improvements, experience gains and losses, and changes in actuarial assumptions and methods will also impact the total actuarial accrued liability (AAL) and the unfunded portion thereof.

SECTION 1 – EXECUTIVE SUMMARY

The unfunded actuarial accrued liability as of July 1, 2023 is as follows:

Actuarial Accrued Liability	\$935,234,527
Actuarial Value of Assets	728,696,523
Unfunded Actuarial Accrued Liability	<u>\$206,538,004</u>

See Table 7 for the detailed development of the actuarial accrued liability and the unfunded actuarial accrued liability.

Factors influencing the UAAL from year to year include actual experience versus that expected based on the actuarial assumptions (for both assets and the actuarial accrued liability), changes in actuarial assumptions, procedures or methods and any changes in benefit provisions. The actual experience measured in this valuation is that which occurred during the prior plan year (FY 2023). There was an \$11.5 million experience loss on the actuarial value of assets, as discussed earlier, and an \$11.6 million net experience liability loss, primarily due to larger individual salary increases than expected, based on actuarial assumptions, which also impacted the post-retirement escalator increases for retirees and beneficiaries. The combined result of both asset and liability experience was an increase in the UAAL of \$23.1 million.

Due to SF 513, there are 28 new members in the current valuation whose past years of service are being recognized by POR for calculating benefits and determining vested status. Typically, this type of transaction would impact the unfunded actuarial accrued liability, but SF 513 provided for an additional contribution by the State to ensure the unfunded actuarial accrued liability for POR would not increase. The liability for the 28 members who transferred into POR was \$3.8 million which was offset by a transfer from IPERS of \$0.9 million and an additional State contribution of \$2.9 million. Because the liability for these members is included in the July 1, 2023 valuation but the transfer from IPERS and the additional State contribution were not received before July 1, 2023, those amounts are shown as receivables in this funding valuation report.

Between July 1, 2022 and July 1, 2023, the change in the unfunded actuarial accrued liability for the System was as follows (in millions):

	\$ millions
Unfunded Actuarial Accrued Liability, July 1, 2022	\$183.7
· effect of contributions below the actuarial rate	3.7
· expected decrease due to amortization method	(3.4)
· investment experience	11.5
· liability experience*	11.6
· other experience	<u>(0.6)</u>
Unfunded Actuarial Accrued Liability, July 1, 2023	\$206.5

* Liability loss is about 1.2% of total actuarial accrued liability.

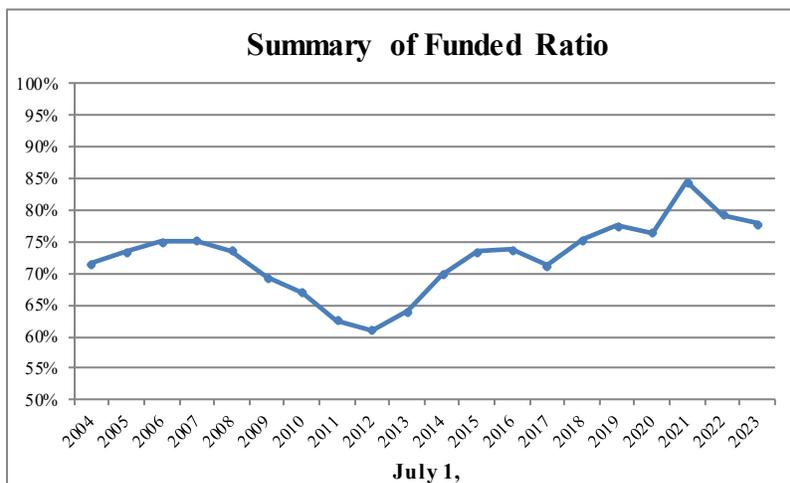

SECTION 1 – EXECUTIVE SUMMARY

An evaluation of the unfunded actuarial accrued liability on a pure dollar basis may not provide a complete analysis since only the difference between the assets and liabilities (which are both very large numbers) is reflected. Another way to evaluate the unfunded actuarial accrued liability and the progress made in its funding is to track the funded status, the ratio of the actuarial value of assets to the actuarial accrued liability. The funded status information, on both an actuarial and a market value basis, is shown on the following table (in millions). Note that the funded ratio does not indicate whether the System has sufficient funds to settle all current obligations, nor is it necessarily indicative of the need for future funding.

	7/1/2019	7/1/2020	7/1/2021	7/1/2022	7/1/2023
<i>Using Actuarial Value of Assets:</i>					
Funded Ratio	77.5%	76.4%	84.4%	79.2%	77.9%
Unfunded Actuarial Accrued Liability (UAAL)	\$154	\$177	\$122	\$184	\$207
<i>Using Market Value of Assets:</i>					
Funded Ratio	78.8%	80.5%	103.5%	70.7%	72.9%
Unfunded Actuarial Accrued Liability (UAAL)	\$145	\$147	(\$27)	\$259	\$254

Note: assumptions were changed in the 2020 and 2022 valuations.

The funded status of the System over the last 20 years is shown in the following graph. Due to the asset smoothing method, the impact of the Great Recession was not fully recognized until the 2012 valuation, at which point the funded ratio was 61%. Since that time, strong investment returns and increasing contributions have strengthened the funded status of the System. The decrease in the funded ratio during the 2022 valuation was primarily due to the adoption of a new set of actuarial assumptions, which included lowering the assumed investment rate of return from 7.0% to 6.5%.

SECTION 1 – EXECUTIVE SUMMARY

Contribution Rates

Under the Entry Age Normal cost method, the actuarial contribution rate consists of:

- a “normal cost” for the portion of projected liabilities allocated by the actuarial cost method to service of members during the current year;
- an “administrative expense” for the expenses expected to be paid from the trust for the year; and
- an “unfunded actuarial accrued liability contribution” for the excess of the actuarial accrued liability over the actuarial value of assets.

The UAAL is funded using a “layered” approach with new pieces of UAAL amortized as a level-percent of payroll over a closed 20-year period, beginning with the July 1, 2018 valuation. The legacy UAAL (amount as of July 1, 2017) continues to be amortized on its existing schedule (15 years remaining).

The total actuarial contribution rate for the Plan Year beginning July 1, 2023 is 66.56% of covered payroll. Based on the member contribution rate of 11.40%, the State’s portion of the actuarial contribution rate is 55.16%, an increase of 1.11% from the prior valuation. The sources of change are shown in the following table. The largest factor in the change in the actuarial contribution rate from the prior valuation was the unfavorable experience on both the System’s assets and actuarial liabilities, which combined to increase the contribution rate by 3.04%. This unfavorable experience was partially offset by the larger than expected increase in covered payroll. Part of the increase in covered payroll was due to the additional 28 members transferred to POR under Senate File 513. Although there was no increase in the UAAL as a result of SF 513, the higher payroll lowered the contribution rate for the UAAL. The additional covered payroll from these 28 members, combined with larger salary increases than expected, lowered the contribution rate by a total of 2.46% of pay.

	Plan Year Beginning	
	<u>July 1, 2023</u>	<u>July 1, 2022</u>
Prior year total contribution rate	65.45%	51.87%
• change due to asset (gains)/losses	1.52%	(0.80%)
• change due to liability experience	1.52%	0.15%
• change due to other actuarial experience	0.02%	0.05%
• change due to assumption changes	0.00%	14.69%
• change due to actual contribution rate (above)/below the actuarial rate	0.49%	(0.50%)
• payroll increase (greater)/less than assumed	(1.25%)	(0.09%)
• change in normal cost rate	0.02%	0.08%
• employees transferred per SF 513	(1.21%)	0.00%
Current year total actuarial contribution rate	66.56%	65.45%
Members' contribution rate	<u>(11.40%)</u>	<u>(11.40%)</u>
State's actuarial contribution rate	55.16%	54.05%

SECTION 1 – EXECUTIVE SUMMARY

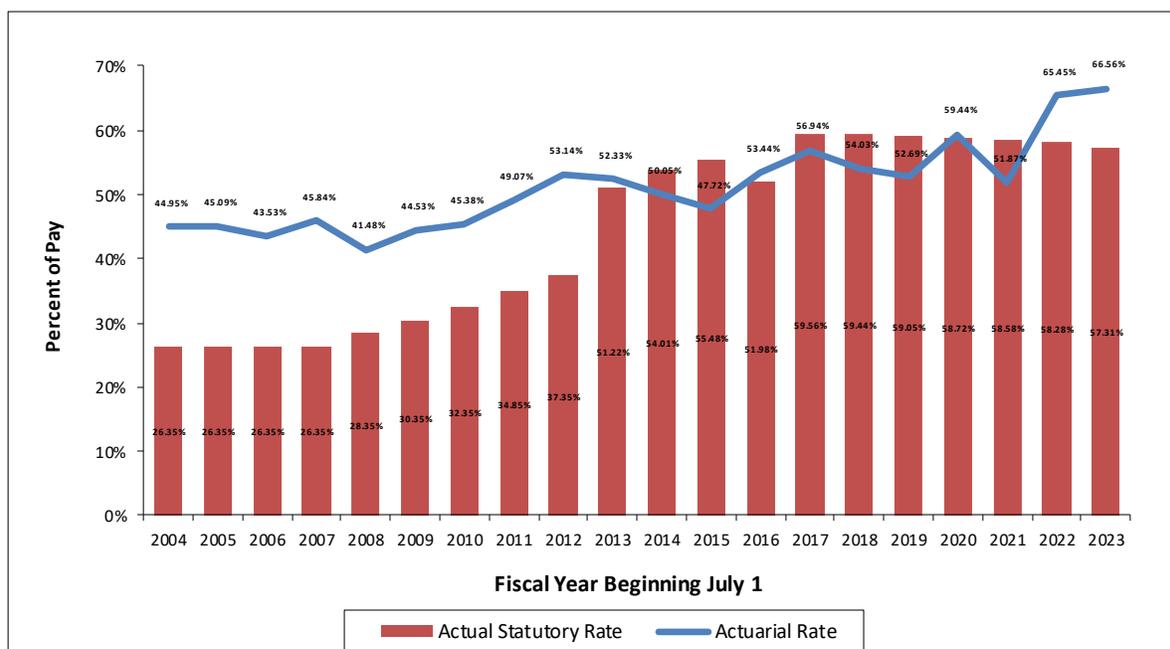

Contributions to the System are made by both the members and the State. Historically, members contributed 9.35% of pay, but the member contribution rate increased to 9.85% for FY 2012, 10.35% for FY 2013, 10.85% for FY 2014 and to an ultimate rate of 11.35% in FY 2015 (changed to 11.40% in conjunction with a benefit change by the 2014 legislature). The State's contribution rate was 17.00% of pay for many years but began increasing 2.00% per year commencing July 1, 2008. In 2010, the Legislature passed a bill that continued the 2.00% annual increase with an ultimate contribution rate of 37.00% for FY 2018 and thereafter until the normal contribution rate is less than 37.00%. It also provided for a supplemental State appropriation of \$5.0 million per year beginning July 1, 2013 (originally July 1, 2012 but extended by the 2012 legislature) and ending June 30 of the fiscal year during which the System's funded ratio is at least 85%. However, HF 2459 in the 2016 session reduced the supplemental contribution for FY 2017 to \$2.5 million. The supplemental contribution returned to \$5.0 million for FY 2018 and is expected to remain at that level.

Projected results over the next 20 years, assuming all assumptions are met each year, indicate that the supplemental contributions of \$5.0 million from the State will continue to be needed. However, actual experience will unfold differently than assumed, especially from year to year, and is therefore expected to impact these projections, perhaps significantly. The State's fixed contribution rate of 37.00% and the supplemental contributions of \$5.0 million payable until the funded ratio is 85%, along with the member contribution rate of 11.40%, are expected to maintain the System's funded status between 75% to 80% over the next 20 years if all actuarial assumptions, including a 6.50% return, are met each year in the future. While the System is not projected to move to a funded ratio of 100%, there is not a projected depletion date, and the System is expected to be able to pay all future benefits as they become due, if all assumptions are met. However, there is risk to the System's funding if unfavorable experience occurs since contribution rates to fund the System do not adjust when actual experience is less favorable than assumed. In order to improve the System's funded ratio and move it to 100% over a reasonable period, a one-time infusion of additional money or higher ongoing contributions will be necessary. We are happy to assist in further analysis if there is interest in considering alternate funding policies.

The following graph shows the total actuarial contribution rate compared to the actual contribution rate in each year.

SECTION 1 – EXECUTIVE SUMMARY

Following an eleven-year period in which actual statutory contributions to the System were significantly less than the actuarial contribution rate, the contribution shortfall has been largely eliminated since the 2013 valuation, with a contribution margin occurring in six of the last eleven valuations. Retirement systems that are funded with fixed contribution rates typically oscillate between rates that are above and then below the actuarial contribution rate. The pattern observed for POR in recent years is not unexpected or unusual, but it should continue to be closely monitored to determine if the trend is likely to continue and some change to the funding policy is needed.

Summary

The System’s funded ratio decreased slightly from 79% to 78%, primarily due to unfavorable experience on both the System’s assets and actuarial liabilities. On a market value of assets basis, the System’s funded ratio increased from 71% to 73% because of the FY 2023 return of 9.9%.

Although the combined contribution rate for members and the State is 48.40% of pay, which is well above the System’s normal cost rate of 35.32%, the increase in the UAAL from the unfavorable investment and liability experience resulted in a situation where current contributions do not move the System’s funded ratio significantly over the next ten to twenty years. However, future investment experience will have a significant impact on the System’s funding progress. We will continue to monitor the actuarial metrics in the valuation and evaluate the System’s long-term funding in future valuations.

The State’s actuarial contribution rate for FY 2023 was 54.05%, while the State’s statutory fixed contribution rate was only 37.00% of covered payroll. However, the \$5.0 million supplemental contribution by the State for FY 2023 represented about 10% of payroll so the total expected

SECTION 1 – EXECUTIVE SUMMARY

State contribution for FY 2023 was 46.88%, still below the actuarial contribution rate by 7.17% of pay. This resulted in an increase to the UAAL of \$3.7 million. The supplemental contribution of \$5.0 million remains in place for FY 2024 and reduces the contribution shortfall for FY 2024. If all actuarial assumptions are met, the System’s funded ratio is expected to remain under 85% for over twenty years so the supplemental contribution of \$5 million will continue to be needed.

The long-term financial health of this, and all retirement systems, is heavily dependent on two key items: (1) future investment returns and (2) contributions to the System. Over the past five years, the actual dollar amount of investment return, in total, was less than the expected return on a market basis and, as a result, the System has \$47.4 million in net deferred asset losses that will be recognized in the actuarial value of assets over the next four years. In addition, total contributions have been at or above the actuarial contribution rate in six of the past last eleven years, which has improved the System’s funding. However, if the System’s funded ratio is to move to 100% over a reasonable period of time, a one-time infusion of additional money or higher ongoing contributions will be needed, assuming all assumptions are met.

A typical retirement plan faces many different risks. The term “risk” is most commonly associated with an outcome with undesirable results. However, in the actuarial world risk can be translated as uncertainty. The actuarial valuation process uses many actuarial assumptions to project how future contributions and investment returns will meet the cash flow needs for future benefit payments. Of course, we know that actual experience will not unfold exactly, year to year, as anticipated by the assumptions and that uncertainty, whether favorable or unfavorable, creates risk. Actuarial Standard of Practice Number 51 defines risk as the potential of actual future measurements to deviate from expected results due to actual experience that is different than the actuarial assumptions. Risk evaluation is an important part of managing a defined benefit plan. Please see Section 5 of this report for an in-depth discussion of the specific risks facing the Iowa Peace Officers’ Retirement, Accident and Disability System.

A summary of key data elements and valuation results as of July 1, 2023 and July 1, 2022 is presented on the following page. More detail on each of these elements can be found in the following Sections of this report.

SECTION 1 – EXECUTIVE SUMMARY

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM

SUMMARY OF PRINCIPAL RESULTS

	July 1, 2023 Valuation	July 1, 2022 Valuation	% Change
PARTICIPANT DATA			
Number of			
Active Members	588	555	5.9
Retirees/Beneficiaries/Disabled Members	679	673	0.9
Inactive Vested Members	44	42	4.8
Inactive Nonvested Members	<u>10</u>	<u>9</u>	11.1
Total Members	1,321	1,279	3.3
Projected Annual Salaries of Active Members	\$ 56,089,142	\$ 50,602,707	10.8
Average Annual Projected Salary	\$ 95,390	\$ 91,176	4.6
Average Annual Benefit for Retired Members, Disabled Members and Beneficiaries	\$ 59,472	\$ 57,541	3.4
ASSETS AND LIABILITIES			
Total Actuarial Accrued Liability	\$935,234,527	\$884,315,607	5.8
Actuarial Value of Assets	<u>728,696,523</u>	<u>700,657,990</u>	4.0
Unfunded Actuarial Accrued Liability	\$206,538,004	\$183,657,617	12.5
Funded Ratio (Actuarial Value of Assets)	77.9%	79.2%	(1.6)
Market Value of Assets	\$681,343,286	\$625,063,131	9.0
Funded Ratio (Market Value of Assets)	72.9%	70.7%	3.1
CONTRIBUTION RATES			
Normal Cost Rate	35.32%	35.33%	(0.0)
Administrative Expenses	0.64%	0.71%	(9.9)
Amortization of Unfunded Actuarial Accrued Liability (Level Percent of Payroll)	<u>30.60%</u>	<u>29.41%</u>	4.0
Actuarial Required Contribution Rate	66.56%	65.45%	1.7
Member Contribution Rate	<u>(11.40%)</u>	<u>(11.40%)</u>	0.0
Employer Actuarial Required Contribution Rate	55.16%	54.05%	2.1
Statutory State Fixed Contribution Rate	(37.00%)	(37.00%)	0.0
State Supplemental Contribution*	<u>(8.91%)</u>	<u>(9.88%)</u>	(9.8)
Contribution Shortfall/(Margin)	9.25%	7.17%	29.0

* The supplemental contribution is \$5 million annually until the System is at least 85% funded.

SECTION 2 – SYSTEM ASSETS

In many respects, an actuarial valuation can be thought of as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2023. On that date, the assets available for the payment of benefits are appraised. The assets are compared with the liabilities of the System, which are generally in excess of assets. The actuarial process leads to a method of determining the contributions needed by members and the employer in the future to balance the System assets and liabilities.

Market Value of Assets

The current market value represents the “snapshot” or “cash-out” value of System assets as of the valuation date. In addition, market values of assets provide a basis for measuring investment performance from time to time. At July 1, 2023, the market value of assets for the Retirement System was \$681.3 million. Table 1 is a comparison, at market values, of System assets as of July 1, 2022 and July 1, 2023, in total and by investment category. Table 2 summarizes the change in the market value of assets from July 1, 2022 to July 1, 2023.

Actuarial Value of Assets

The market value of assets, representing a “cash-out” value of System assets, is not the best measure of the System’s ongoing ability to meet its obligations. To arrive at a suitable value for the actuarial valuation, a technique for determining the actuarial value of assets is used which dampens swings in the market value while still indirectly recognizing market values. The actuarial value of assets is equal to the market value of assets less a five-year phase-in of the excess (shortfall) between expected investment return (based on the actuarial assumption) and actual investment return.

Tables 3 and 4 show the development of the actuarial value of assets (AVA) as of the valuation date.

SECTION 2 – SYSTEM ASSETS

TABLE 1
IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
ANALYSIS OF NET ASSETS AT MARKET VALUE

	July 1, 2023		July 1, 2022	
	Amount	% of Total	Amount	% of Total
Pooled Cash	\$ 3,057,830	0.4 %	\$ 4,769,793	0.7 %
Receivables*	7,618,918	1.1	3,610,000	0.6
Common Stocks	465,731,727	67.1	401,679,201	62.5

July 1, 2023	681,343,286	9.9%	728,696,523	4.8%

* Time-weighted rate of return, as reported by the System.

SECTION 3 – SYSTEM LIABILITIES

In the previous section, an actuarial valuation was compared with an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date, July 1, 2023. In this section, the discussion will focus on the commitments of the System, which are referred to as its liabilities.

Table 6 contains an analysis of the actuarial present value of all future benefits (PVFB) for contributing members, inactive members, retirees and their beneficiaries. The analysis is provided for each group.

The liabilities summarized in Table 6 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes measures of both benefits already earned and future benefits expected to be earned. For all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and for the lives of the surviving beneficiaries.

The actuarial assumptions used to determine liabilities are based on the results of an Experience Study completed in July 2022. This current set of assumptions, as adopted by the Board, is shown in Appendix C and was first used in the July 1, 2022 valuation. The Board's election to change the actuarial cost method from Aggregate to Entry Age Normal was first reflected in the July 1, 2008 valuation.

Actuarial Liabilities

A fundamental principle in financing the liabilities of a retirement program is that the cost of its benefits should be related to the period in which benefits are earned, rather than to the period of benefit distribution. An actuarial cost method is a mathematical technique that allocates the present value of future benefits into annual costs. In order to do this allocation, it is necessary for the funding method to “breakdown” the present value of future benefits into two components:

- (1) that which is attributable to the past and
- (2) that which is attributable to the future.

Actuarial terminology calls the part attributable to the past the “past service liability” or the “actuarial accrued liability”. The portion allocated to the future is known as the present value of future normal costs, with the specific piece of it allocated to the current year being called the “normal cost”. Table 7 contains the calculation of actuarial accrued liability.

SECTION 3 – SYSTEM LIABILITIES

TABLE 6

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM

**PRESENT VALUE OF FUTURE BENEFITS
AS OF JULY 1, 2023**

1. Active employees	
a. Retirement Benefit	\$540,437,393
b. Withdrawal Benefit	2,798,094
c. Pre-Retirement Death Benefit	5,625,669
d. Disability Benefit	44,672,303
e. Total	<u>\$593,533,459</u>

SECTION 3 – SYSTEM LIABILITIES

TABLE 8

**IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
CALCULATION OF ACTUARIAL GAIN/(LOSS)**

The actuarial gain/(loss) is comprised of both the liability gain/(loss) and the actuarial asset gain/(loss). Each of these represents the difference between the expected and actual values as of July 1, 2023.

1. Expected actuarial accrued liability	
a. Actuarial accrued liability at July 1, 2022	\$ 884,315,607
b. Normal cost for year ending June 30, 2023	17,044,574
c. Benefit payments for fiscal year ending June 30, 2023	(38,776,612)
d. Interest on (a), (b), and (c)	57,348,011
e. Employees transferred per SF 513	3,752,792
f. Expected actuarial accrued liability at July 1, 2023	\$ <u>923,684,372</u>
2. Actuarial accrued liability at July 1, 2023	\$ 935,234,527
3. Actuarial accrued liability gain/(loss) (1f) - (2)	\$ (11,550,155)
4. Expected actuarial value of assets	
a. Actuarial value of assets at July 1, 2022	\$ 700,657,990
b. Contributions for fiscal year ending June 30, 2023	29,712,247
c. Benefit payments and administrative expenses for fiscal year ending June 30, 2023	(39,125,306)
d. Interest on (a), (b), and (c)	45,241,661
e. Employees transferred per SF 513	3,752,792
f. Expected actuarial value of assets at July 1, 2023	\$ <u>740,239,384</u>
5. Actuarial value of assets at July 1, 2023	\$ 728,696,523
6. Actuarial value of assets gain/(loss) (5) - (4f)	\$ (11,542,861)
7. Net actuarial gain/(loss) (3) + (6)	\$ (23,093,016)

TABLE 9

ACTUARIAL GAIN/(LOSS) BY SOURCE

The purpose of conducting an actuarial valuation of a retirement plan is to estimate the costs and liabilities for the benefits expected to be paid from the plan, to determine the annual level of contribution for the current plan year that should be made to support these benefits and, finally, to analyze the plan’s experience. The costs and liabilities of this retirement plan depend not only upon the benefit formula and plan provisions but also upon factors such as the investment return on the Fund, mortality rates among active and retired members, withdrawal and retirement rates among active members, rates at which salaries increase and the rate at which the cost-of-living increases.

The actuarial assumptions employed as to these and other contingencies in the current valuation are set forth in Appendix C of this report.

Since the overall results of the valuation will reflect the choice of assumptions made, periodic studies of the various components of the plan’s experience are conducted in which the experience for each component is analyzed in relation to the assumption used for that component (called an experience study). This summary is not intended to be an actual “experience study” but rather an analysis of sources of gain and loss in the past plan year.

Gain/(Loss) By Source

The System experienced a net actuarial loss on liabilities of \$11,550,000 during the plan year ended June 30, 2023 and an actuarial loss on assets of \$11,543,000. The combined actuarial loss was \$23,093,000. The major components of this net actuarial experience gain are shown below:

Liability Sources	<u>Gain/(Loss)</u>
Salary Increases	\$ (6,937,000)
Retirements	(837,000)
Terminations	853,000
Disabilities	587,000
Deaths	(376,000)
New Entrants/Rehires	(701,000)
Postretirement Escalator	(4,426,000)
Miscellaneous	287,000
Total Liability Gain/(Loss)	\$ (11,550,000)
Asset Gain/(Loss)	\$ (11,543,000)
Net Actuarial Gain/(Loss)	\$ (23,093,000)

SECTION 3 – SYSTEM LIABILITIES

TABLE 10

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM

Total	<u>593,533,459</u>	
Inactive Members		<u>9,824,482</u>
<u>Total Liabilities</u>		<u><u>\$1,154,878,047</u></u>

SECTION 4 – EMPLOYER CONTRIBUTIONS

The previous two sections were devoted to a discussion of the assets and liabilities of the System. A comparison of Tables 4 and 6 indicates that current assets fall short of meeting the present value of future benefits (total liability). This is expected in all but a fully closed fund, where no further contributions are anticipated.

In an active system, there will almost always be a difference between the actuarial value of assets and total liabilities. This deficiency has to be made up by future contributions and investment returns. An actuarial valuation sets out a schedule of future contributions that will deal with this deficiency in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. Under an actuarial cost method, the contributions required to meet the difference between current assets and current liabilities are allocated each year between three elements: (1) the normal cost, (2) administrative expenses and (3) the payment on the unfunded actuarial accrued liability.

The term “fully funded” is often applied to a system in which contributions at the normal cost rate are sufficient to pay for the benefits of existing employees as well as for those of new employees. More often than not, systems are not fully funded, either because of past benefit improvements that have not been completely funded and/or because of actuarial deficiencies that have occurred because experience has not been as favorable as anticipated. Under these circumstances, an unfunded actuarial accrued liability (UAAL) exists.

Description of Rate Components

Effective with the July 1, 2008 valuation, the actuarial cost method used by the System changed from Aggregate to the traditional Entry Age Normal (EAN) – level percent of pay cost method. Under the EAN cost method, the actuarial present value of each member’s projected benefit is allocated on a level basis over the member’s compensation between the entry age of the member and the assumed exit ages. The portion of the actuarial present value allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to prior years of service is called the actuarial accrued liability. The unfunded actuarial accrued liability represents the difference between the actuarial accrued liability and the actuarial value of assets as of the valuation date. The unfunded actuarial accrued liability is calculated each year and reflects experience gains/losses.

The Board has elected to amortize the legacy unfunded actuarial accrued liability as of July 1, 2017 as a level-percent of payroll, over a closed 30-year period beginning July 1, 2008. New layers of unfunded actuarial accrued liability are created on each actuarial valuation date and amortized, as a level-percent of payroll, over a closed 20-year period. Changes in the unfunded actuarial accrued liability that are created by a change in assumptions or changes in benefit structure will be amortized over a reasonable time period as selected by the Board after consultation with their actuary. In our opinion, the amortization policy meets the requirements of Actuarial Standard of Practice Number 4.

SECTION 4 – EMPLOYER CONTRIBUTIONS

The expected total contributions in the next year from members, the employer and the State are slightly less than the normal cost, plus interest on the UAAL (about 94%). Based on the current funded status of the System and ignoring future experience that will impact the funded ratio, estimated future contributions are not expected to exceed the normal cost and interest on the UAAL in the future. However, the difference is so small that the UAAL is expected to grow very slowly and, consequently, the funded ratio is expected to improve. Please note that the System's assets are expected to continue to grow in the future and be able to pay future benefits when due. However, if there is a desire to move the System to a funded ratio of 100% in a reasonable period like 20 to 25 years, additional contributions above the current level will likely be necessary. We are happy to assist in further analysis if there is interest in considering alternate funding policies.

In our professional judgement, the funding policy adopted by the Board of Trustees produces a reasonable actuarial determined contribution, as defined in Actuarial Standard of Practice Number 4. Contributions are developed with the intent of being level as a percentage of covered payroll, assuming the number of active members remains stable. Furthermore, the funding policy is expected to accumulate sufficient assets to make all future benefit payments as they become due, if all assumptions are met.

Contribution Rate Summary

The normal cost rate is developed in Table 11. Table 12 develops the contribution rate for amortization of the unfunded actuarial accrued liability. Table 13 develops the total actuarial contribution rate.

SECTION 4 – EMPLOYER CONTRIBUTIONS

TABLE 11

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM

**NORMAL COST RATE
AS OF JULY 1, 2023**

		<u>% of Pay</u>
1. Normal Cost		
a. Retirement Benefit	\$15,302,547	28.70%
b. Withdrawal Benefit	360,459	0.68%
c. Pre-Retirement Death Benefit	392,319	0.74%
d. Disability Benefit	2,773,882	5.20%
e. Total	<u>\$18,829,207</u>	<u>35.32%</u>
2. Expected Payroll in FY24 for Current Actives	\$53,303,088	
3. Normal Cost Rate [(1e)/(2)]	35.32%	

SECTION 4 – EMPLOYER CONTRIBUTIONS

TABLE 12

**IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
UNFUNDED ACTUARIAL ACCRUED LIABILITY CONTRIBUTION RATE
AS OF JULY 1, 2023**

In our opinion, the use of the layered amortization policy, with new bases amortized over closed 20-year periods complies with Actuarial Standard of Practice Number 4. This policy will fully amortize the individual, as well as the total, unfunded actuarial accrued liability within a reasonable timeframe and/or reduce the amount of the UAAL by a reasonable amount within a sufficiently short period. Note, however, that the System is funded with fixed contribution rates, not the actuarial contribution rate developed in the actuarial valuation process each year.

Amortization Bases	Original Amount	July 1, 2023 Remaining Payments	Date of Last Payment	Outstanding Balance as of July 1, 2023	Annual Contribution*

*Amortization of UAAL is as a level percent of payroll assuming a 2.75% annual increase in payroll.

SECTION 5 – RISK CONSIDERATIONS

Actuarial Standards of Practice are issued by the Actuarial Standards Board and are binding on credentialed actuaries practicing in the United States. These standards generally identify what the actuary should consider, document and disclose when performing an actuarial assignment. In September 2017, Actuarial Standard of Practice Number 51, *Assessment and Disclosure of Risk in Measuring Pension Obligations*, (ASOP 51) was issued as final with application to measurement dates on or after November 1, 2018. This ASOP, which applies to funding valuations, actuarial projections, and actuarial cost studies of proposed plan changes, was first applicable for the July 1, 2019 actuarial valuation for the State of Iowa Peace Officers' Retirement, Accident and Disability System (System).

A typical retirement plan faces many different risks, but the greatest risk is the inability to make benefit payments when due. If plan assets are depleted, benefits may not be paid which could create legal and litigation risk or the plan could become “pay as you go”. The term “risk” is most commonly associated with an outcome with undesirable results. However, in the actuarial world, risk can be translated as uncertainty. The actuarial valuation process uses many actuarial assumptions to project how future contributions and investment returns will meet the cash flow needs for future benefit payments. Of course, we know that actual experience will not unfold exactly as anticipated by the assumptions and that uncertainty, whether favorable or unfavorable, creates risk. ASOP 51 defines risk as the potential of actual future measurements to deviate from expected results due to actual experience that is different than the actuarial assumptions.

The various risk factors for a given plan can have a significant impact – positive or negative – on the actuarial projection of liability and contribution rates.

There are a number of risks inherent in the funding of a defined benefit plan. These include:

- economic risks, such as investment return and price inflation;
- demographic risks such as mortality, payroll growth, aging population including impact of baby boomers, and retirement ages;
- contribution risk, i.e., the potential for contribution rates to be too high for the plan sponsor/employer to pay and
- external risks such as the regulatory and political environment.

Although the last two are real risks to the funding of the System, ASOP 51 does not require the actuary to opine on these particular risks so no discussion is included here.

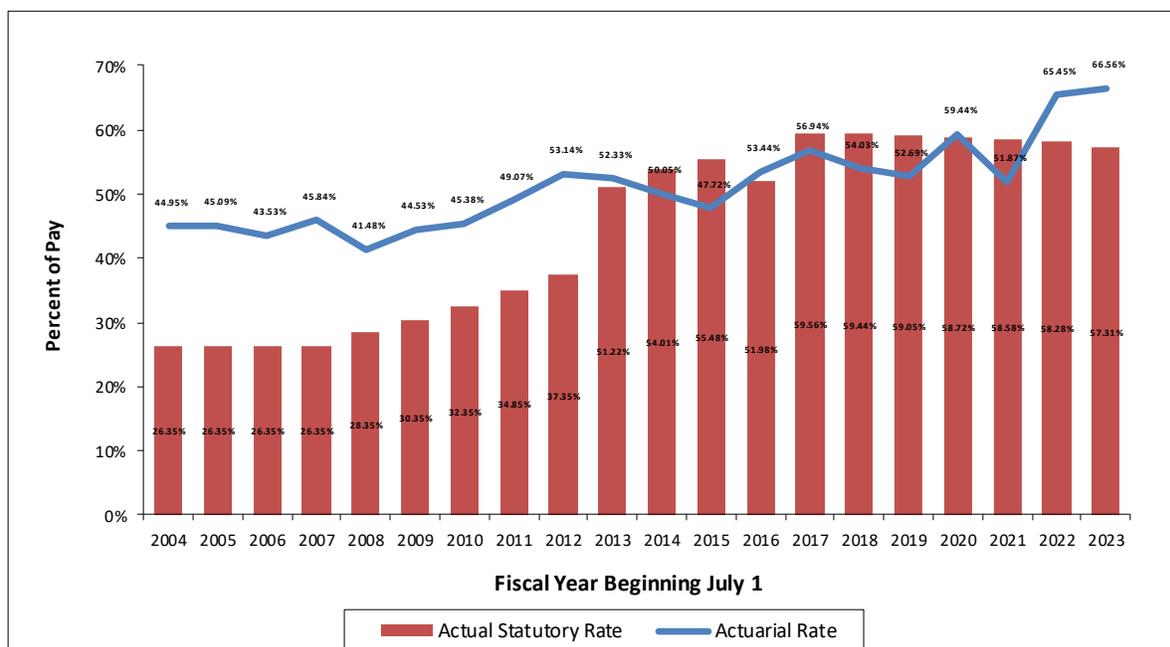

There is a direct correlation between healthy, well-funded retirement plans and consistent contributions equal to the full actuarial contribution rate each year. Fixed contribution rates to the POR System are made by both the members and the State which tends to create more risk than a system whose funding policy requires that the actuarial contribution rate be made each year. In addition, a supplemental annual State contribution of \$5.0 million is required to be made until the System's funded ratio is at least 85%. However, in FY 2017, the additional contribution amount was reduced to \$2.5 million, so there is some risk that the supplemental contributions could be reduced, suspended, or removed prematurely. The supplemental contribution is a significant element in the ability of the POR System to reach full funding in a reasonable period of time. Therefore, it is critical that the System receive such supplemental contributions. For example, if the

SECTION 5 – RISK CONSIDERATIONS

State did not contribute the additional \$5.0 million in fiscal year 2024, which currently equates to 8.91% of pay, the contribution shortfall would be increased to 18.16%.

Given the changes that were made legislatively in 2010 and implemented over the next few years, the statutory contribution rate has exceeded the actuarial rate in six of the last ten valuations. When this occurs, it results in more rapid reduction in the unfunded actuarial accrued liability than scheduled and improvement in the System’s funded status.

The most significant risk factor for the Iowa Peace Officers’ Retirement, Accident and Disability System is investment return because of the volatility of returns and the size of plan assets compared to payroll (see Table 14). The impact of investment risk is exacerbated by the System’s funding policy which includes fixed contribution rates for both members and the State. When actual investment experience is lower than the assumed return, the contributions to the System do not automatically adjust to compensate for the loss of investment income. The delay in responding to adverse economic experience because of the need for legislation can result in a significant reduction in the System’s funded status before corrective action occurs.

Under the revised Actuarial Standards of Practice (ASOP) No. 4 effective for valuations after February 15, 2023, we are required to include a low-default-risk obligation measure of the System’s liability in our funding valuation report. This is an informational disclosure as described below and would not be appropriate for assessing the funding progress or health of the plan. This measure uses the unit credit cost method and reflects all the assumptions and provisions of the funding valuation except the discount rate is derived from considering low-default-risk fixed income securities. For our analysis we used the FTSE Pension Discount Curve based on market bond rates published by the Society of Actuaries as of June 30, 2023 and with the 30-year spot rate used for all durations beyond 30. Using these assumptions, we calculate the

SECTION 5 – RISK CONSIDERATIONS

low-default-risk obligation liability to be \$1,101,708,000. This amount approximates the termination liability if the plan (or all covered employment) ended on the valuation date and all of the accrued benefits had to be paid with cash-flow matched bonds. This assurance of funded status and benefit security is typically more relevant for corporate plans than for governmental plans since governments rarely have the need or option to completely terminate a plan.

A key demographic risk for all retirement systems, including the State of Iowa Peace Officers' Retirement, Accident and Disability System, is improvements in mortality (longevity) greater than anticipated. While the actuarial assumptions reflect small, continuous improvements in mortality experience over time and these assumptions are refined every experience study, the larger risk arises because there is a possibility of some sudden shift, perhaps from a significant medical breakthrough, that could quickly increase liabilities. Likewise, there is some possibility of a significant public health crisis that could result in a significant number of additional deaths in a short time period, as we experienced with the COVID-19 pandemic. This kind of event would also be significant, although more easily absorbed. While either of these events could happen, it represents a small probability and thus represents much less risk than the volatility associated with investment returns.

Finally, the unfunded actuarial accrued liability is amortized as a level percentage of payroll. The underlying assumption used in developing the payment schedule assumes an increasing payroll over time which is dependent on a stable employment level, i.e., active member count remains the same. However, the number of active members in the System has decreased significantly since 2009. To the extent this trend continues, covered payroll will be lower than expected which will result in fewer contribution dollars and slower funding progress.

The following exhibits summarize some historical information that helps indicate how certain key risk metrics have changed over time. Many are due to the natural maturation of the retirement system.

TABLE 14

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
HISTORICAL ASSET VOLATILITY RATIOS

As a retirement system matures, the size of the market value of assets increases relative to the covered payroll of active members, on which the System is funded. The size of the plan assets relative to covered payroll, sometimes referred to as the asset volatility ratio, is an important indicator of the contribution risk for the System. The higher this ratio, the more sensitive a plan’s contribution rate is to investment return volatility. In other words, it will be harder to recover from investment losses with increased contributions.

Actuarial Valuation Date	Market Value of Assets	Estimated Plan Year Payroll	Asset Volatility Ratio	Increase in ACR with a Return 10% Lower than Assumed*
7/1/2004	\$242,279,998	\$32,519,722	7.45	5.29%
7/1/2005	260,104,910	33,336,856	7.80	5.54%

7/1/2014	392,194,960	43,070,315	9.11	6.47%
7/1/2015	410,598,719	45,128,506	9.10	6.46%
7/1/2016	403,084,512	44,775,765	9.00	6.39%
7/1/2017	468,300,420	44,820,732	10.45	7.42%
7/1/2018	528,781,898	45,276,379	11.68	8.29%
7/1/2019	539,362,237	46,955,334	11.49	8.16%
7/1/2020	604,572,836	48,452,696	12.48	8.86%
7/1/2021	807,593,863	49,109,332	16.44	11.67%
7/1/2022	625,063,131	50,602,707	12.35	8.77%
7/1/2023	681,343,286	56,089,142	12.15	8.63%

Note: Years prior to the 6/30/2010 were provided by the prior actuary.

*The impact of asset smoothing is not reflected in the impact on the Actuarial Contribution Rate (ACR). Current year assumptions are used for all years shown.

The assets at July 1, 2023 are 12.15 times larger than payroll, so underperforming the investment return assumption by 10.00% (i.e., earn -3.50% for one year) is equivalent to an actuarial loss of \$68 million or 122% of payroll. While the actual impact in the first year is mitigated by the asset smoothing method and amortization of the UAAL, this illustrates the significant risk associated with volatile investment returns.

**SECTION 5 – RISK CONSIDERATIONS****TABLE 15****IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
HISTORICAL CASH FLOWS**

Plans with negative cash flows tend to experience increased sensitivity to investment return volatility. Cash flows, for this purpose, are measured as contributions less benefit payments. The difference must be funded by investment income so typically negative cash flows of more than 5% can impact asset allocation. Furthermore, if the System has negative cash flows and experiences returns below the assumed rate, there are fewer assets to be reinvested to earn the higher returns that typically follow.

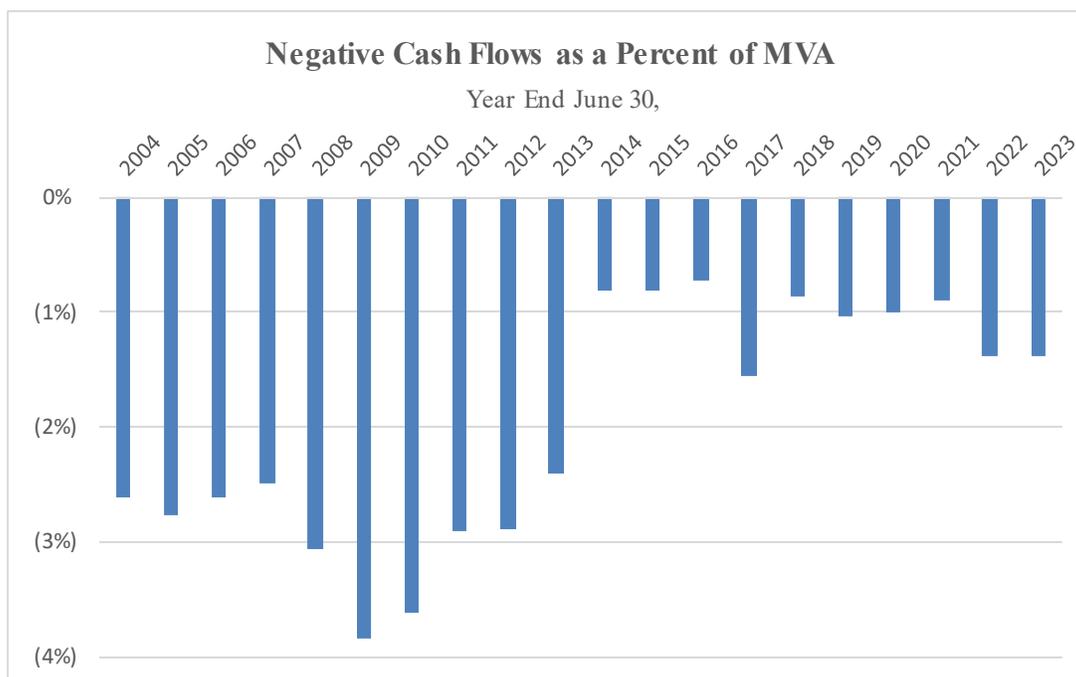

Year End	Market Value of Assets (MVA)	Contributions	Benefit Payments and Expenses	Net Cash Flow	Net Cash Flow as a Percent of MVA
6/30/2004	\$242,279,998	\$8,528,821	\$14,857,619	(\$6,328,798)	(2.61%)
6/30/2005	260,104,910	8,436,691	15,618,315	(7,181,624)	(2.76%)

Note: Years prior to the 6/30/2010 were provided by the prior actuary.

SECTION 5 – RISK CONSIDERATIONS

TABLE 15
IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
HISTORICAL CASH FLOWS
(continued)

The reduction in negative cash flows coincides with increases in the contribution rate, as well as the introduction of the supplemental State contributions. Historically, members contributed 9.35% of pay, but the member contribution rate increased to 9.85% for FY 2012, 10.35% for FY 2013, 10.85% for FY 2014 and to an ultimate rate of 11.35% in FY 2015 (changed to 11.40% in conjunction with a benefit change by the 2014 legislature). The State’s contribution rate was 17.00% of pay for many years but began increasing 2.00% per year commencing July 1, 2008. In 2010, the Legislature passed a bill that continued the 2.00% annual increase with an ultimate contribution rate of 37.00% for FY 2018 and thereafter until the normal contribution rate is less than 37.00%. It also provided for a supplemental State appropriation of \$5.0 million per year beginning July 1, 2013 (originally July 1, 2012, but extended by the 2012 legislature) and ending June 30 of the fiscal year during which the System’s funded ratio is at least 85%. However, HF 2459 in the 2016 session reduced the supplemental contribution for FY 2017 to \$2.5 million. The supplemental contribution returned to \$5.0 million for FY 2018 and is expected to remain at that level until the System is at least 85% funded. When the State supplemental contribution stops, the magnitude of the negative cash flows will increase.

TABLE 16

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
LIABILITY MATURITY MEASUREMENTS

Most public sector retirement systems have been in operation for many years. As a result, they have aging plan populations, and in some cases declining active populations, resulting in an increasing ratio of retirees to active members and a growing percentage of retiree liability. With more of the total liability residing with retirees, investment volatility has a greater impact on the funding of the system because it is more difficult to restore the system financially after losses occur when there is comparatively less payroll over which to spread costs.

Year End	Retiree Liability (a)	Total Actuarial Accrued Liability (b)	Retiree Percentage (a) / (b)
6/30/2009	\$254,721,456	\$432,894,495	58.8%
6/30/2010	252,596,545	433,402,131	58.3%
6/30/2011	265,218,811	461,594,916	57.5%
6/30/2012	272,401,805	480,157,072	56.7%
6/30/2013	280,492,644	498,468,989	56.3%
6/30/2014	297,967,737	515,859,721	57.8%
6/30/2015	305,590,517	534,626,780	57.2%
6/30/2016	328,089,443	578,388,848	56.7%
6/30/2017	368,319,757	636,058,890	57.9%
6/30/2018	387,738,398	658,487,243	58.9%
6/30/2019	410,196,806	684,752,489	59.9%
6/30/2020	439,895,461	751,076,556	58.6%
6/30/2021	467,834,786	780,150,277	60.0%
6/30/2022	532,071,119	884,315,607	60.2%
6/30/2023	551,520,106	935,234,527	59.0%

Note: Years prior to the 6/30/2010 were provided by the prior actuary.

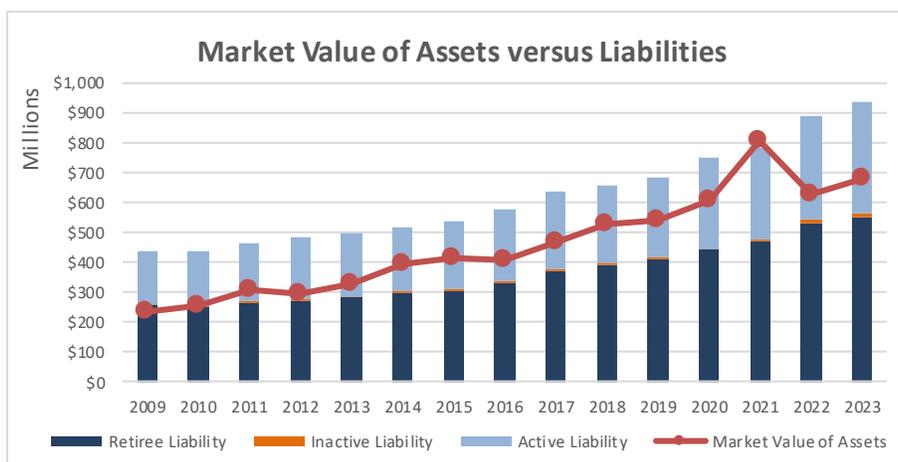

TABLE 17

**IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
HISTORICAL MEMBER STATISTICS**

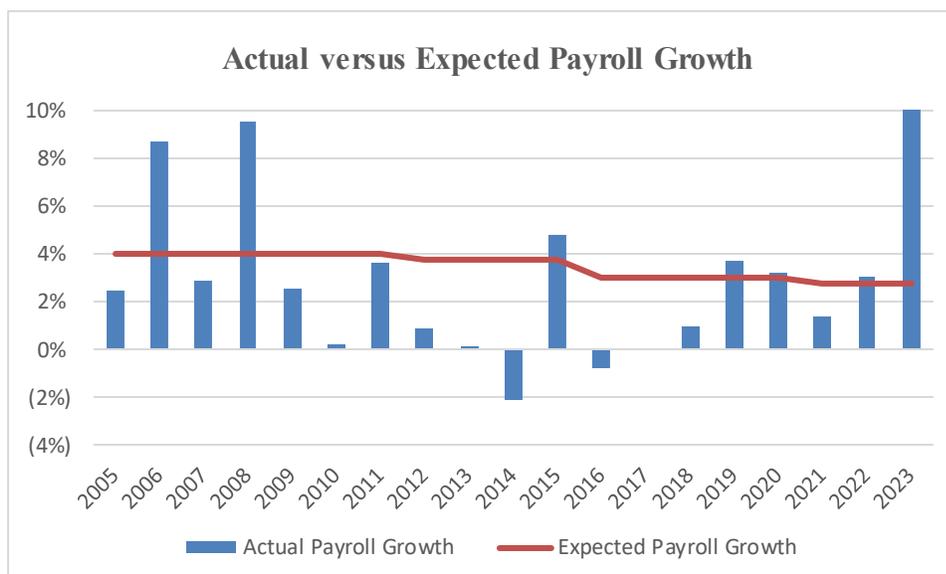

The underlying assumption used in developing the payment schedule for the unfunded actuarial accrued liability assumes an increasing payroll over time which is dependent on a stable employment level, i.e., active member count remains the same. However, the number of active members in the System has decreased significantly since 2009. Over this period, the average increase in covered payroll has been 2.9% compared to expected growth of 2.75% to 4.00%. Lower payroll growth results in lower contributions, including payments on the unfunded actuarial accrued liability, so there is slower funding progress.

Valuation Date June 30,	Number	Projected Payroll	Actual Payroll Increase	Expected Payroll Increase
2004	566	\$32,519,722		
2005	580	33,336,856	2.51%	4.00%
2006	618	36,231,639	8.68%	4.00%
2007	631	37,268,060	2.86%	4.00%
2008	646	40,829,801	9.56%	4.00%
2009	662	41,862,395	2.53%	4.00%
2010	643	41,954,599	0.22%	4.00%
2011	644	43,493,715	3.67%	4.00%
2012	618	43,902,429	0.94%	3.75%
2013	599	43,984,577	0.19%	3.75%
2014	578	43,070,315	(2.08%)	3.75%
2015	589	45,128,506	4.78%	3.75%
2016	563	44,775,765	(0.78%)	3.00%
2017	540	44,820,732	0.10%	3.00%
2018	537	45,276,379	1.02%	3.00%
2019	551	46,955,334	3.71%	3.00%
2020	555	48,452,696	3.19%	3.00%
2021	547	49,109,332	1.36%	2.75%
2022	555	50,602,707	3.04%	2.75%
2023	588	56,089,142	10.84%	2.75%

Note: Years prior to 6/30/2010 were provided by prior actuary.

TABLE 18
IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
COMPARISON OF VALUATION RESULTS UNDER
ALTERNATE INVESTMENT RETURN ASSUMPTIONS
(\$ in thousands)

This exhibit compares the key results of the July 1, 2023 valuation under five (5) different investment return assumptions to illustrate the impact of different assumptions on the funding of the System. Note that only the investment return assumption is changed, as identified in the heading below. All other assumptions are unchanged for the purpose of this analysis.

Table with 6 columns: Investment Return Assumption (6.00%, 6.25%, 6.50%, 6.75%, 7.00%) and rows for Contribution Rates, Actuarial Accrued Liability, Actuarial Value of Assets, and Funded Ratio.

Note: All other assumptions are unchanged for the purpose of this sensitivity analysis. Numbers may not add due to rounding.

SECTION 6 – OTHER INFORMATION

In this section, we have included some exhibits that reflect the historical funding of the System (reflecting some information formerly disclosed under GASB 25) and the expected benefit payments for the next 30 years.

APPENDIX B

SUMMARY OF PLAN PROVISIONS

APPENDIX B – SUMMARY OF PLAN PROVISIONS

Chapter 97A of the Iowa code sets out the benefit provisions of the Iowa Peace Officers' Retirement, Accident and Disability System, which are briefly summarized as follows:

Retirement Benefit

Eligibility

Age 55 with 22 years of service.

Average Final Compensation

Average of the member's regular compensation, including longevity and per diem, during the high three (3) years of service.

Monthly Annuity

The sum of (1) and (2):

- (1)
 - a. For retirement prior to July 1, 1990, 50% of average final compensation at retirement. Average final compensation equals average of highest three years of compensation.
 - b. For retirement after June 30, 1990 and before July 1, 1992, 54% of average final compensation at retirement.
 - c. For retirement after June 30, 1992 and before July 1, 1993, 56% of average final compensation at retirement.
 - d. For retirement after June 30, 1993 and before July 1, 1994, 58% of average final compensation at retirement.
 - e. For retirement after June 30, 1994, and before July 1, 2000, 60% of average final compensation at retirement.
 - f. For retirement after July 1, 2000, 60.5% of average final compensation at retirement.
- (2) For members who do not withdraw member contributions:
 - a. For retirement after June 30, 1990 and before July 1, 1991, 0.3% of average final compensation for each year of service over 22 years (up to 8 years). Service after age 55 is excluded.
 - b. For retirement after June 30, 1991 and before October 16, 1992, 0.6% of average final compensation for each year of service over 22 years (up to 8 years). Service after age 55 is excluded.

APPENDIX B – SUMMARY OF PLAN PROVISIONS

- c. For retirement after October 15, 1992 and before July 1, 1996, 0.6% of average final compensation for each year of service over 22 years (up to 8 years).
- d. For retirement after June 30, 1996, 1.5% of average final compensation for each year of service over 22 years (up to 8 years).
- e. For retirement after June 30, 1998, 1.5% of average final compensation for each year of service over 22 years (up to 10 years).
- f. For retirement after June 30, 2000, 2.75% of average final compensation for each year of service over 22 years (up to 10 years).

Early Retirement Benefit

Eligibility

Effective July 1, 1996, age 50 (but not age 55) with 22 years of service.

Monthly Annuity

The benefit provided as a retirement benefit actuarially reduced for commencement prior to age 55.

Deferred Vested Benefit

Eligibility

Four years of service.

Monthly Annuity

At age 55. The benefit provided as a retirement benefit at termination times a service ratio. The service ratio equals service at termination divided by 22 (not greater than 1.0).

Ordinary Disability Benefit

Eligibility

None.

Benefit

- (1) If service at disability is greater than or equal to 5 years, the greater of 50% of average final compensation at disability or the benefit amount calculated under a service retirement.
- (2) If service at disability is less than 5 years, 25% of average final compensation at disability.

APPENDIX B – SUMMARY OF PLAN PROVISIONS

Accidental Disability Benefit

Eligibility

None.

Benefit

- (1) For retirement prior to July 1, 1990, 66-2/3% of average final compensation at disability.
- (2) For retirement after June 30, 1990 and before July 1, 1998, 60% of average final compensation at disability. If the service amount at disability is greater than or equal to 22 years, the greater of 60% of average final compensation at disability or the benefit amount calculated under a service retirement.
- (3) For retirement after July 1, 1998, the greater of 60% of average final compensation at disability or the benefit amount calculated under a service retirement.

Ordinary Death Benefit

Eligibility

For member in service: None.

For member not in service: Four years of service.

Benefit

- (1) A lump sum equal to 50% of compensation during the last year of employment, or
- (2) A pension based on 40% of average final compensation but not less than 25% of compensation paid to an active member having the rank of senior patrol officer of the state patrol. For members not in service, benefit is multiplied by the ratio of service at termination to 22 years (not greater than 1.0).
- (3) Additional benefit for members in service of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol for each child.

APPENDIX B – SUMMARY OF PLAN PROVISIONS

- Payment Date***
- (1) For members in service: Immediately upon death of member.
 - (2) For member not in service: Payable when member would have been age 55. If there are children of the member, payable commencing at the member's death until children reach age 18 or 22. Pension resumes when member would have been age 55.

Accidental Death Benefit

Eligibility In actual performance of duty.

- Benefit***
- (1) 50% of average final compensation payable to surviving spouse, children or dependent parents.
 - (2) If there is not surviving spouse, children or dependent parents, or if accidental death occurs while not in the actual performance of duty, an Ordinary Death Benefit is payable.
 - (3) Additional benefit for members in service of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol, for each child.
 - (4) If the death meets specified criteria, a lump sum of \$100,000 payable to surviving spouse, children, dependent parents, or estate.

Death After Retirement

- Benefit***
- (1) 50% of retirement allowance of retired member but not less than 25% of compensation paid to an active member having the rank of senior patrol officer of the state patrol.
 - (2) Additional benefit of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol, for each child.

Adjustments to Pensions

Each July 1 and January 1, if applicable, the following adjustments are made: Monthly earnable compensation payable to an active member, of the same rank and position in the salary scale as was held by the retired or deceased member at the time of the member's retirement or death, for July of the current year less that of the preceding July, times the following percentages:

APPENDIX B – SUMMARY OF PLAN PROVISIONS

- (1) 40% for members receiving a service retirement allowance and for beneficiaries receiving an accidental death benefit.
- (2) 40% for members with five or more years of membership who are receiving an ordinary disability benefit.
- (3) 40% for member receiving an accidental disability benefit.
- (4) 24% for members with less than five years of membership who are receiving an ordinary disability benefit and for beneficiaries receiving an ordinary death benefit.
- (5) 50% of the amount which would have been added to the benefit of the retired member, for surviving spouses, but not less than 25% of the monthly earnable compensation paid to an active member having the rank of senior patrol officer.

Additionally, the following amounts will be added to a member or beneficiary monthly pension as follows:

<u>Years Since Retired*</u>	<u>Amount</u>
0-4	\$15
5-9	20
10-14	25
15-19	30
20 or more	35

*Measured in whole years.

There was a change in the way the flat escalator was applied effective July 1, 2010. Prior to 2010, the amount increased for each year after retirement.

Surviving children’s pensions are adjusted each July to equal 6% of monthly earnable compensation payable to an active member having the rank of senior patrol officer of the state patrol.

No pension adjustments are granted to members who retired with less than 22 years of membership.

APPENDIX B – SUMMARY OF PLAN PROVISIONS

State Contributions

For FY 2018 and thereafter, the State will contribute the lesser of 37% of payroll or the normal contribution rate, as defined in Chapter 97 A.8. Prior to FY 2018, the State had been making scheduled increases to its contribution rate of 2% of pay per year for ten years. The State also provides for a supplemental appropriation of \$5 million per year beginning July 1, 2013 (originally July 1, 2012 but extended by the 2012 legislature) and ending June 30 of the fiscal year during which the System’s funded ratio is at least 85%. For FY 2017, the supplemental contribution was reduced to \$2.5 million, but it returned to \$5.0 million for FY 2018 and thereafter.

Member Contributions

The following percentage of earnable compensation will be paid as member contributions:

<u>Period</u>	<u>Member Contribution Rate</u>
January 1, 1995 - June 30, 1995	8.35%
July 1, 1995 – June 30, 2011	9.35%
July 1, 2011 – June 30, 2012	9.85%
July 1, 2012 – June 30, 2013	10.35%
July 1, 2013 – June 30, 2014	10.85%
July 1, 2014 forward*	11.40%

*Beginning July 1, 2020, members contribute 11.35% of compensation plus an additional 0.05% to finance disability benefits for duty-related cancer and infectious diseases. The additional 0.05% contribution is subject to review every five years.

Withdrawal of Member Contributions

Effective July 1, 1990, members who terminate service, other than by death or disability, can elect to withdraw their accumulated contributions with interest in lieu of any benefits to which the member may be entitled from the System.

Transfers With Statewide Fire and Police Retirement System

Beginning July 1, 1996, vested members of an eligible retirement system who terminate employment and, within one year, commences covered employment under another eligible retirement system, may elect to transfer the average accrued benefit or the refund liability earned from the former system to the current system. Once such transfer is completed, service under the former system shall be treated as membership service under the current system.

APPENDIX C

ACTUARIAL ASSUMPTIONS AND METHODS

APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

Actuarial Cost Method

Liabilities and contributions shown in this report are computed using the Individual Entry Age method of funding.

Sometimes called "funding method," this is a particular technique used by actuaries for establishing the amount of the annual actuarial cost of pension System benefits, or normal cost, and the related unfunded actuarial accrued liability. Ordinarily the annual contribution to the System is comprised of (1) the normal cost and (2) an amortization payment on the unfunded actuarial accrued liability.

Under the Entry Age Actuarial Cost Method, the **Normal Cost** is computed as the level percentage of pay which, if paid from the earliest time each member would have been eligible to join the System if it then existed (thus, entry age) until his retirement or termination, would accumulate with interest at the rate assumed in the valuation to a fund sufficient to pay all benefits under the System.

The **Actuarial Accrued Liability** under this method at any point in time is the theoretical amount of the fund that would have accumulated had annual contributions equal to the normal cost been made in prior years (it does not represent the liability for benefits accrued to the valuation date). The **Unfunded Actuarial Accrued Liability (UAAL)** is the excess of the actuarial accrued liability over the actuarial value of System assets on the valuation date.

Under this method experience gains or losses, i.e. decreases or increases in accrued liabilities attributable to deviations in experience from the actuarial assumptions, adjust the unfunded actuarial accrued liability.

UAAL Amortization Method

The Board has elected to amortize the legacy unfunded actuarial accrued liability as of July 1, 2017 as a level-percent of payroll, over a closed 30-year period beginning July 1, 2008. New layers of unfunded actuarial accrued liability will be created on each actuarial valuation date and will be amortized, as a level-percent of payroll, over a closed 20-year period. Changes in the unfunded actuarial accrued liability that are created by a change in assumptions or changes in benefit structure will be amortized over a reasonable time period, as selected by the Board after consultation with their actuary. If the System's funded ratio reaches or exceeds 100%, all amortization bases will be eliminated and the surplus (actuarial assets minus actuarial liability) will be amortized over an open 30-year period.

Asset Valuation Method

The System uses an asset valuation method to smooth the effects of market fluctuations. The actuarial value of assets spreads the difference between the actual return and the expected return (based on the actuarial assumption of 6.50%, effective July 1, 2022) evenly over five years.

APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

Technical Procedures

There are a small number of benefit offsets in effect as of July 1, 2023 due to either a QDRO in effect, worker's comp benefits or, if they are disabled, wage earnings over a certain limit. Due to the small number of records impacted and the uncertain duration of these offsets, the full benefit amount is being valued on the member's record.

APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

Actuarial Assumptions

Investment Return: 6.50% per year, net of investment expenses.

Price Inflation: 2.50% per year.

Payroll Growth: 2.75% per year, including price inflation.

Active Members:

1. Ordinary death rates Pub-2010 Safety Employees Median Mortality Table, set back 2 years for males and females, projected generationally using Scale MP-2021.

2. Accidental death rate 8.5 deaths per 10,000 exposed for one year.
80% of deaths are assumed to be accidental.

3. Disability rates

<u>Age</u>	<u>Accidental Disability</u>	<u>Ordinary Disability</u>
20	0.029%	0.007%
25	0.101%	0.025%
30	0.173%	0.043%
35	0.245%	0.061%
40	0.328%	0.082%
45	0.464%	0.116%
50	0.664%	0.166%

80% of disabilities are assumed to be accidental.

4. Withdrawal rates

The following table is used:

<u>Service</u>	<u>Rate</u>
0-3	4.00%
4	3.25%
5	2.75%
6	2.00%
7-10	1.50%
11	1.00%
12	0.75%
13	0.50%
14-19	0.25%
20	0.00%

APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

5. Retirement age

<u>Service</u>	<u>Probability of Retirement</u>
22-27	6%
28	15%
29	15%
30	20%
31	60%
32	100%

No early retirements are assumed.

Inactive vested members are assumed to begin receiving benefits at age 55.

6. Salary scale

<u>Year</u>	<u>Increase</u>
1	8.50%
5	7.50%
10	7.50%
15	4.50%
20+	4.00%

7. Post-retirement adjustments

Same as for retired members.

Retired Members and Other Beneficiaries:

- 1. Mortality rates - Service retirees Pub-2010 Safety Retirees Median Mortality Table, set back 2 years for males and females, projected generationally using Scale MP-2021.
- 2. Mortality rates - Beneficiaries Pub-2010 Contingent Survivors Mortality Table, set back 2 years for males and females, projected generationally using Scale MP-2021.
- 3. Mortality rates - Disabled retirees Pub-2010 Safety Disabled Retirees Mortality Table, set back 2 years for males and females, projected generationally using Scale MP-2021.
- 4. Annual readjustment of pensions Wages for the same rank are assumed to increase 3.50%.

ADDENDUM

**IOWA PEACE OFFICERS' RETIREMENT, ACCIDENT AND DISABILITY SYSTEM
CERTIFICATION**

We have prepared an actuarial valuation of the Iowa Peace Officers' Retirement, Accident and Disability System as of July 1, 2023, for the fiscal year ending June 30, 2024. The results of the valuation are set forth in this addendum, which reflects the benefit provisions in effect on July 1, 2023.

In preparing this report, we relied, without audit, on information (some oral and some in writing) supplied by the System's staff. This information includes, but is not limited to, statutory provisions, employee data, and financial information. In our examination of these data, we have found them to be reasonably consistent and comparable with data used for other purposes. Since the valuation results are dependent on the integrity of the data supplied, the results can be expected to differ if the underlying data is incomplete or missing. It should be noted that if any data or other information is inaccurate or incomplete, our calculations may need to be revised.

The results in this Addendum have been prepared for the sole purpose of providing the information required under Chapter 97 D.5 of the Iowa code. Calculations are based on the following prescribed methods:

Actuarial cost method: Entry Age Normal
Amortization method: Level-percent of payroll
Amortization period: 30 years, open period

All other assumptions, methodologies, and System provisions used are consistent with those used in the regular July 1, 2023 valuation for the Iowa Peace Officers' Retirement, Accident and Disability System.

The results shown in this Addendum may not be consistent with those in the regular July 1, 2023 valuation. The July 1, 2023 valuation results were determined in accordance with generally accepted actuarial principles and practices that are consistent with the Actuarial Standards of Practice promulgated by the Actuarial Standards Board and the applicable Guides to Professional Conduct, amplifying opinion and supporting recommendations of the American Academy of Actuaries. The results shown in this Addendum are not necessarily based on the methodologies adopted by the System.

We are available to answer any questions on the material contained in this report, or to provide explanations or further details as may be appropriate.

The undersigned credentialed actuaries meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained in this report.

ADDENDUM

IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM

SUMMARY OF VALUATION RESULTS UNDER PRESCRIBED METHODOLOGY

This addendum report has been prepared to present the results of a valuation of the Iowa Peace Officers’ Retirement, Accident and Disability System as of July 1, 2023, based on the prescribed methodology under current statutes and regulations issued thereunder.

The unfunded actuarial accrued liability has been amortized as a level-percent of payroll over 30 years. The payroll growth assumption used was 2.75%.

A summary of principal valuation results from the current and the prior valuation follows.

	Actuarial Valuation as of	
	July 1, 2023	July 1, 2022
Summary of Costs		
Normal cost	35.32%	35.33%
Administrative Expenses	0.64%	0.71%
UAAL amortization	<u>20.31%</u>	<u>20.02%</u>
Total	56.27%	56.06%
Less Employee Contribution Rate	<u>(11.40%)</u>	<u>(11.40%)</u>
State Required Contribution	44.87%	44.66%
Funded Status		
Actuarial accrued liability	\$935,234,527	\$884,315,607
Actuarial value of assets	728,696,523	700,657,990
Unfunded actuarial accrued liability	\$206,538,004	\$183,657,617
Funded Ratio	77.92%	79.23%
Asset Values		
Market value of assets (MVA)	\$681,343,286	\$625,063,131
Actuarial value of assets (AVA)	728,696,523	700,657,990
MVA/AVA	93.50%	89.21%
