Board of Trustees  
Iowa Peace Officers' Retirement, Accident  
and Disability System  
215 East 7<sup>th</sup> Street  
Des Moines, IA 50319

Dear Members of the Board:

At your request, we have performed an actuarial valuation of the Iowa Peace Officers' Retirement, Accident and Disability System as of July 1, 2018. The purpose of this report is to provide: (1) a summary of the funded status of the System as of July 1, 2018 and (2) determine the normal contribution rate as defined in Iowa Code Chapter 97A.8. There have been no changes to the plan provisions or actuarial assumptions and methods since the prior valuation.

In preparing our report, we relied, without audit, on information (some oral and some in writing) supplied by the System's staff. This information includes, but is not limited to, statutory provisions, member data and financial information. We found this information to be reasonably consistent and comparable with information provided in prior years. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete, our results may be different and our calculations may need to be revised.

We further certify that all costs, liabilities, rates of interest and other factors for the System have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the System and reasonable expectations); and which, in combination, offer our best estimate of anticipated experience affecting the System.

Nevertheless, the emerging costs will vary from those presented in this report to the extent actual experience differs from that projected by the actuarial assumptions. The Board of Trustees has the final decision regarding the appropriateness of the assumptions and adopted them as indicated in Appendix C.

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for the System. The calculations in the enclosed report have been made on a basis consistent with our understanding of the System's funding requirements and goals. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes. Actuarial computations for purposes of fulfilling financial accounting requirements for the System under Governmental Accounting Standards No. 67 and No. 68 are provided in a separate report.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

We respectfully submit the following report and look forward to discussing it with you.

## SECTION 1 – EXECUTIVE SUMMARY

---

### **Purpose of the Report**

This report presents the results of the July 1, 2018 actuarial valuation of the Iowa Peace Officers' Retirement, Accident and Disability System (PORS). The primary purposes of performing the valuation are as follows:

- to determine the normal contribution rate payable by the State under Chapter 97A.8(1)(b) of the Code of Iowa (referred to in this report as the “actuarial contribution rate”);
- to evaluate the sufficiency of the statutory contribution rates to fund the System over the long term;
- to satisfy the reporting requirements under Chapter 97 D.5 of the Code of Iowa;
- to disclose asset and liability measures indicating the current funded status of the System as of the valuation date; and
- to analyze and report on trends in System contributions, assets, and liabilities over the past several years.

There have been no changes to the plan provisions or the actuarial assumptions and methods since the prior valuation. The valuation results provide a “snapshot” view of the System’s financial condition on July 1, 2018. The unfunded actuarial accrued liability (UAAL) decreased from \$183 million on July 1, 2017 to \$162 million on July 1, 2018, primarily as a result of favorable experience on the System’s valuation assets. A more detailed discussion of actual experience is included later in this section of the report.

The experience of both the System’s assets and liabilities impacts the System’s funding and the actuarial contribution rate. Experience that is more favorable than anticipated, based on actuarial assumptions, will generally lower the UAAL and the actuarial contribution rate, while experience that is less favorable than expected will generally increase the UAAL and the actuarial contribution rate. The State’s actuarial contribution rate decreased from 45.54% in last year’s valuation to 42.63% this year, given the member contribution rate of 11.40%. The State’s actuarial contribution rate exceeds the fixed payroll-related contribution rate for FY 2019 of 37.00% by 5.63%. However, by statute the State is required to make supplemental contributions of \$5.0 million per year until the System is at least 85% funded. When the State’s supplemental contribution for FY 2019 is considered, the contribution shortfall is eliminated and the expected contributions exceed the actuarial contribution rate for the year.

Several key factors impacted the actuarial contribution rate from the last valuation:

- The rate of return on the market value of assets, as provided by the System, was 13.8% which is higher than the assumed rate of return of 7.5% for fiscal year 2018. However, due to the use of an asset smoothing method, only part of the actuarial gain on assets for this year is recognized in the current valuation. Coupled with the recognition of the current year’s portion of the deferred investment experience from prior years, the rate of return on the actuarial value of assets was 10.6%. This produced an actuarial gain that decreased the

## SECTION 1 – EXECUTIVE SUMMARY

---

UAAL by \$14.1 million and lowered the actuarial contribution rate by 2.27% of pay. The market value of assets is now 6.5% higher than the actuarial (smoothed) value of assets, reflecting a net deferred investment gain.

- Actual contributions above the full actuarial contribution rate for FY 2018 resulted in a decrease in the UAAL of \$1.2 million which decreased the actuarial contribution rate by 0.20% of pay.
- There was a liability gain, largely due to actual salary increases and post-retirement escalator increases that were lower than anticipated by the actuarial assumptions. As a result, the UAAL decreased by \$5.3 million and the actuarial contribution rate declined by 0.85% of pay.

The statutory contribution rate for the State is 37.0% of pay for FY 2019. In addition, by statute the State is to make a supplemental contribution of \$5.0 million per year beginning July 1, 2013 until the System is 85% funded. The supplemental contribution of \$5.0 million is an important component of strengthening PORS' long-term funding, as it represents an additional funding source of approximately 11% of payroll. If contributions are made as scheduled, the System's long-term funding is expected to continue to improve. If the State annual supplemental contribution remains at \$5 million until the System is 85% funded and all assumptions are met in the future, the System is estimated to reach a funded ratio of 100% in about 19 years (in the 2037 valuation).

### **Membership**

The number of active members in the current valuation (537) decreased by 0.6% from the number in the prior valuation (540). As a result of the decline in the active population, along with lower than expected salary increases, the covered payroll of the System only increased by 1.0%, compared to the expected increase of 3.0%. The lower active payroll has an adverse impact on the funding of the System because fewer contribution dollars flow into the System to help fund the UAAL.

As the following graph indicates, the number of active members in the System is much lower in the more recent years. Over this period, the number of retirees has continually grown to the point where the number of retirees is now larger than the number of actives. This is not necessarily problematic and such growth in the number of retirees is expected and factored into the valuation process. However, this demographic characteristic can create a funding challenge because the volatility in investment returns has a greater impact on the actuarial contribution rate due to the size of plan assets compared to payroll.

**SECTION 1 – EXECUTIVE SUMMARY**

**Peace Officers' Retirement Membership**

**Assets**

As of July 1, 2018, the System had total funds, measured on a market value basis, of \$528,781,898. This is an increase of \$60,481,478 from last year's market value of \$468,300,420. The market value of assets is not used directly in the calculation of the funded status or the actuarial contribution rate. The System uses an asset valuation method to smooth the effects of market fluctuations. The actuarial value of assets spreads the difference between the actual return and the expected return (based on the actuarial assumption) on the market value of assets evenly over five years (four years prior to the 2017 valuation). See Tables 3 and 4 for a detailed development of the actuarial value of assets. The components of the change in the asset values are shown in the following table:

	Market Value	Actuarial Value
Net Assets, July 1, 2017	\$468,300,420	\$453,128,907
• Member Contributions	5,123,936	5,123,936
• Employer Contributions	16,498,155	16,498,155
• Supplemental State Appropriations	5,000,000	5,000,000
• Benefit Payments	(30,966,019)	(30,966,019)
• Administrative Expenses	(233,024)	(233,024)
• Investment Income	65,058,430	47,951,469
Net Assets, July 1, 2018	\$528,781,898	\$496,503,424

## SECTION 1 – EXECUTIVE SUMMARY

The net rate of return on the market value of assets for FY 2018, as provided by the System, was 13.8%. Measured on the actuarial value of assets, the rate of return was 10.6% which resulted in an actuarial gain of \$14.1 million.

The market value of assets is currently \$32.3 million, or 6.5%, greater than the actuarial value of assets. This deferred asset gain will be recognized over the next four years, resulting in a decrease in the actuarial contribution rate, unless offset by unfavorable experience in future years.

*During this period, the actuarial value of assets has been both above and below the market value of assets, which is expected when using an asset smoothing method.*

*Rates of return on the market value of assets have been extremely volatile, while the return on the actuarial value of assets has been more stable. This illustrates the advantage of using an asset smoothing method.*

### System Liabilities

The actuarial accrued liability is that portion of the present value of future benefits that will not be paid by future employer normal costs or member contributions. The difference between this liability and asset values at the same date is referred to as the unfunded actuarial accrued liability (UAAL). The unfunded actuarial accrued liability will be reduced if the employer's contributions exceed the employer's normal cost for the year, after allowing for interest on the previous balance of the

## SECTION 1 – EXECUTIVE SUMMARY

unfunded actuarial accrued liability. Benefit improvements, experience gains and losses, and changes in actuarial assumptions and methods will also impact the total actuarial accrued liability (AAL) and the unfunded portion thereof.

The unfunded actuarial accrued liability as of July 1, 2018 is as follows:

Actuarial Accrued Liability	\$658,487,243
Actuarial Value of Assets	496,503,424
Unfunded Actuarial Accrued Liability	\$161,983,819

See Table 7 for the detailed development of the Actuarial Accrued Liability and Table 11 for the calculation of the Unfunded Actuarial Accrued Liability.

Other factors influencing the UAAL from year to year include actual experience versus that expected based on the actuarial assumptions (for both assets and the actuarial accrued liability), changes in actuarial assumptions, procedures or methods and any changes in benefit provisions. The actual experience measured in this valuation is that which occurred during the prior plan year (FY 2018). There was a \$14.1 million experience gain on the actuarial value of assets and a \$5.3 million net experience gain on the actuarial accrued liability, primarily due to salary increases and post-retirement escalator increases that were less than expected. The combined result of both asset and liability experience was a decrease in the UAAL of \$19.4 million.

Between July 1, 2017 and July 1, 2018 the change in the unfunded actuarial accrued liability for the System was as follows (in millions):

	<u>\$ millions</u>
Unfunded Actuarial Accrued Liability, July 1, 2017	\$182.9
• effect of contributions above the actuarial rate	(1.2)
• expected decrease due to amortization method	(0.2)
• investment experience	(14.1)
• liability experience*	(5.3)
• other experience	<u>(0.1)</u>
Unfunded Actuarial Accrued Liability, July 1, 2018	\$162.0

\* Liability gain is about 0.8% of total actuarial accrued liability.

An evaluation of the unfunded actuarial accrued liability on a pure dollar basis may not provide a complete analysis since only the difference between the assets and liabilities (which are both very large numbers) is reflected. Another way to evaluate the unfunded actuarial accrued liability and the progress made in its funding is to track the funded status, the ratio of the actuarial value of assets to the actuarial accrued liability. The funded status information, on both an actuarial and a market value basis, is shown on the following table (in millions). Note that the funded ratio does not indicate whether or not the System has sufficient funds to settle all current obligations, nor is it necessarily indicative of the need for future funding.

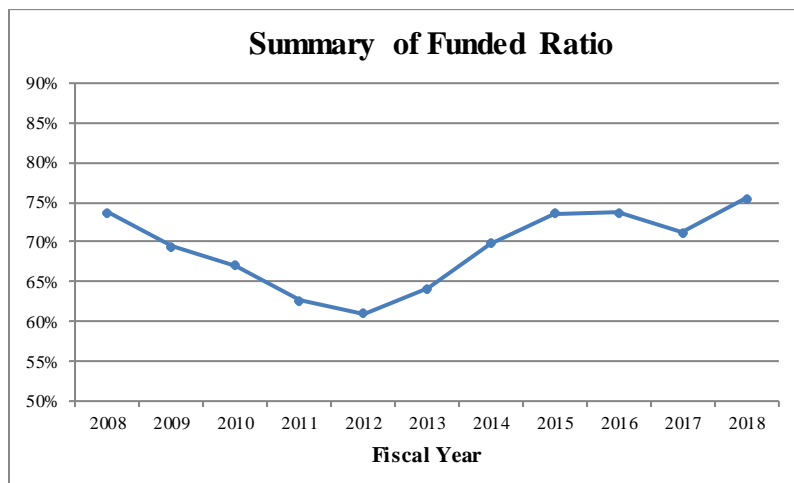

## SECTION 1 – EXECUTIVE SUMMARY

	7/1/2014	7/1/2015	7/1/2016	7/1/2017	7/1/2018
<b><i>Using Actuarial Value of Assets:</i></b>					
Funded Ratio	69.8%	73.5%	73.7%	71.2%	75.4%
Unfunded Actuarial Accrued Liability (UAAL)	\$156	\$142	\$152	\$183	\$162
<b><i>Using Market Value of Assets:</i></b>					
Funded Ratio	76.0%	76.8%	69.7%	73.6%	80.3%
Unfunded Actuarial Accrued Liability (UAAL)	\$124	\$124	\$175	\$168	\$130

Note: assumptions were changed in the 2016 and 2017 valuations.

The funded status of the System since 2008 (when the current Entry Age Normal cost method was first adopted) is shown in the following graph. Due to the asset smoothing method, the impact of the Great Recession was not fully recognized until the 2012 valuation at which point the funded ratio was 61%. Since that time, strong investment returns and increasing contributions have strengthened the funded status of the System.

### **Contribution Rates**

Under the Entry Age Normal cost method, the actuarial contribution rate consists of:

- a “normal cost” for the portion of projected liabilities allocated by the actuarial cost method to service of members during the current year;
- an “administrative expense” for the expenses expected to be paid from the trust for the year; and
- an “unfunded actuarial accrued liability contribution” for the excess of the actuarial accrued liability over the actuarial value of assets.

**SECTION 1 – EXECUTIVE SUMMARY**

The Board elected to amortize the UAAL using a “layered” approach with new pieces of UAAL amortized as a level-percent of payroll over a closed 20-year period, beginning with the July 1, 2018 valuation. The legacy UAAL (amount as of July 1, 2017) continues to be amortized on its current schedule (20 years remaining).

The total contribution rate for the Plan Year beginning July 1, 2018 is 54.03% of covered payroll. Based on the member contribution rate of 11.40%, the State’s portion of the actuarial contribution rate is 42.63%. The sources of change are shown in the following table:

	<b>Plan Year Beginning</b>	
	<b><u>July 1, 2018</u></b>	<b><u>July 1, 2017</u></b>
Prior year total contribution rate	56.94%	53.44%
• change due to asset (gains)/losses	(2.27%)	(1.10%)
• change due to liability experience	(0.85%)	(0.30%)
• change due to other actuarial experience	0.43%	0.73%
• change due to assumption changes	0.00%	3.29%
• change due to asset valuation method change	0.00%	0.76%
• change due to actual contribution rate (above)/below the actuarial rate	(0.20%)	0.11%
• change in normal cost rate	(0.02%)	0.01%
Current year total actuarial contribution rate	54.03%	56.94%
Members' contribution rate	<u>(11.40%)</u>	<u>(11.40%)</u>
State's actuarial contribution rate	42.63%	45.54%

Contributions to the System are made by both the members and the State. Historically, members contributed 9.35% of pay, but the member contribution rate increased to 9.85% for FY 2012, 10.35% for FY 2013, 10.85% for FY 2014 and to an ultimate rate of 11.35% in FY 2015 (changed to 11.40% in conjunction with a benefit change by the 2014 legislature). The State’s contribution rate was 17.00% of pay for many years, but began increasing 2.00% per year commencing July 1, 2008. In 2010, the Legislature passed a bill that continued the 2.00% annual increase with an ultimate contribution rate of 37.00% for FY 2018 and thereafter until the normal contribution rate is less than 37.00%. It also provided for a supplemental State appropriation of \$5.0 million per year beginning July 1, 2013 (originally July 1, 2012, but extended by the 2012 legislature) and ending June 30 of the fiscal year during which the System’s funded ratio is at least 85%. However, HF 2459 in the 2016 session reduced the supplemental contribution for FY 2017 to \$2.5 million. The supplemental contribution returned to \$5.0 million for FY 2018 and is expected to remain at that level. Current projections estimate that the supplemental contributions of \$5.0 million will be needed for 4 more years, if all actuarial assumptions are met in the future. The State’s statutory fixed contribution rate for FY 2019 is 37.00%. The State’s fixed contribution rate of 37.00% and the supplemental contributions until the funded ratio is 85%, along with the member contribution rate, are expected to move the System to fully funded status in 2037, if all actuarial assumptions are met in the future.

## SECTION 1 – EXECUTIVE SUMMARY

The following graph shows the total actuarial contribution rate compared to the actual contribution rate in each year.

Following an eleven-year period in which actual contributions scheduled to be paid to the System were significantly less than the actuarial contribution rate, the contribution shortfall has been largely eliminated in the last six valuations, with a contribution margin occurring in four of the last six valuations. Additionally, had the full amount of the supplemental contribution of \$5.0 million been paid for FY 2017, a contribution margin would also have existed for that year. The State contribution rate for FY 2019 of 37.00%, along with the State’s annual supplemental contribution of \$5.0 million until the System is 85% funded, is expected to continue the positive trend for the System’s funded status, absent adverse experience in future years.

### Summary

Although the System’s funded ratio remains fairly low (75%), the outlook for the long-term health and sustainability of the System is positive. The combined contribution rate for members and the State is 48.40% of pay, which is well above the System’s normal cost rate of 26.49%. In addition, the State is scheduled to make supplemental contributions of \$5.0 million per year until the System reaches a funded ratio of 85%.

It takes many years for the impact of additional contributions to materially improve the System’s funded ratios. However, these changes result in a much healthier future outlook for the System and are expected to move the System toward fully funded status in the coming years, if all actuarial assumptions are met.

The State’s actuarial contribution rate for FY 2018 was 45.54%, while the State’s statutory fixed

## SECTION 1 – EXECUTIVE SUMMARY

---

contribution rate was only 37.00% of covered payroll. However, the \$5.0 million supplemental contribution by the State for FY 2018 represented about 11% of payroll so the total expected State contribution for FY 2018 was 48.16%. This resulted in a contribution surplus of 2.62% of payroll, or \$1.2 million. The supplemental contribution is expected to remain at \$5.0 million for FY 2019 and thereafter, until the System reaches a funded ratio of 85%. To the extent the supplemental contributions of \$5.0 million continue to be paid by the State, they will either more rapidly fund the System, if all actuarial assumptions are met, or provide some cushion for the impact of adverse experience on the System's funding. Based on the current valuation results, the \$5.0 million supplemental contribution for FY 2019 will more than offset the shortfall between the State's actuarial contribution rate and the fixed State contribution of 37.00% of payroll for FY 2019. As a result, the contribution shortfall of 5.63% of pay will become a contribution margin of 5.41% of pay.

The long-term financial health of this, and all retirement systems, is heavily dependent on two key items: (1) future investment returns and (2) contributions to the System. Over the past five years, the actual dollar amount of investment return, in total, has exceeded the expected return on a market basis and, as a result, the System has \$32.3 million in deferred asset gains that will be recognized in the Actuarial Value of Assets over the next few years. In addition, total contributions to the System have increased which is expected to improve the long-term funding outlook of the System. While the impact of increased contributions on the System's long-term funding is significant, the improvement in the funded ratio and UAAL resulting from these changes will not be apparent in the funding results for many years.

A summary of key data elements and valuation results as of July 1, 2018 and July 1, 2017 are presented on the following page. More detail on each of these elements can be found in the following Sections of this report.

\* The supplemental contribution is \$5 million annually (except for FY 2017, which was \$2.5 million) until the System is at least 85% funded.

## SECTION 2 – SYSTEM ASSETS

---

In many respects, an actuarial valuation can be thought of as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2018. On that date, the assets available for the payment of benefits are appraised. The assets are compared with the liabilities of the System, which are generally in excess of assets. The actuarial process leads to a method of determining the contributions needed by members and the employer in the future to balance the System assets and liabilities.

### **Market Value of Assets**

The current market value represents the “snapshot” or “cash-out” value of System assets as of the valuation date. In addition, market values of assets provide a basis for measuring investment performance from time to time. At July 1, 2018 the market value of assets for the Retirement System was \$528,781,898. Table 1 is a comparison, at market values, of System assets as of July 1, 2017 and July 1, 2018, in total and by investment category. Table 2 summarizes the change in the market value of assets from July 1, 2017 to July 1, 2018.

### **Actuarial Value of Assets**

Neither the market value of assets, representing a “cash-out” value of System assets, nor the book value of assets, representing the cost of investments, may be the best measure of the System’s ongoing ability to meet its obligations. To arrive at a suitable value for the actuarial valuation, a technique for determining the actuarial value of assets is used which dampens swings in the market value while still indirectly recognizing market values. The actuarial value of assets is equal to the market value of assets less a five-year phase-in of the excess (shortfall) between expected investment return (based on the actuarial assumption) and actual investment return.

Tables 3 and 4 show the development of the actuarial value of assets (AVA) as of the valuation date.

## SECTION 3– SYSTEM LIABILITIES

---

In the previous section, an actuarial valuation was compared with an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date, July 1, 2018. In this section, the discussion will focus on the commitments of the System, which are referred to as its liabilities.

Table 6 contains an analysis of the actuarial present value of all future benefits (PVFB) for contributing members, inactive members, retirees and their beneficiaries. The analysis is provided for each group.

The liabilities summarized in Table 6 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes measures of both benefits already earned and future benefits expected to be earned. For all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and for the lives of the surviving beneficiaries.

The actuarial assumptions used to determine liabilities are based on the results of an Experience Study. The economic assumptions were reviewed in June, 2016 and the demographic assumptions were evaluated in June, 2017. This set of assumptions, as adopted by the Board, is shown in Appendix C and was first used in the July 1, 2017 valuation. The Board's election to change the actuarial cost method from Aggregate to Entry Age Normal was first reflected in the July 1, 2008 valuation.

### **Actuarial Liabilities**

A fundamental principle in financing the liabilities of a retirement program is that the cost of its benefits should be related to the period in which benefits are earned, rather than to the period of benefit distribution. An actuarial cost method is a mathematical technique that allocates the present value of future benefits into annual costs. In order to do this allocation, it is necessary for the funding method to “breakdown” the present value of future benefits into two components:

- (1) that which is attributable to the past and
- (2) that which is attributable to the future.

Actuarial terminology calls the part attributable to the past the “past service liability” or the “actuarial accrued liability”. The portion allocated to the future is known as the present value of future normal costs, with the specific piece of it allocated to the current year being called the “normal cost”. Table 7 contains the calculation of actuarial accrued liability.

---

**TABLE 8**

**IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM  
CALCULATION OF ACTUARIAL GAIN/(LOSS)**

The actuarial gain/(loss) is comprised of both the liability gain/(loss) and the actuarial asset gain/(loss). Each of these represents the difference between the expected and actual values as of July 1, 2018.

1. Expected actuarial accrued liability	
a. Actuarial accrued liability at July 1, 2017	\$ 636,058,890
b. Normal cost for year ending June 30, 2018	11,264,175
c. Benefit payments for fiscal year ending June 30, 2018	(30,966,019)
d. Interest on (a), (b), and (c)	47,408,997
e. Expected actuarial accrued liability at July 1, 2018	\$ <u>663,766,043</u>
2. Actuarial accrued liability at July 1, 2018	\$ 658,487,243
3. Actuarial accrued liability gain/(loss) (1e) - (2)	\$ 5,278,800
4. Expected actuarial value of assets	
a. Actuarial value of assets at July 1, 2017	\$ 453,128,907
b. Contributions for fiscal year ending June 30, 2018	26,622,091
c. Benefit payments and administrative expenses for fiscal year ending June 30, 2018	(31,199,043)
d. Interest on (a), (b), and (c)	33,816,135
e. Expected actuarial value of assets at July 1, 2018	\$ <u>482,368,090</u>
5. Actuarial value of assets at July 1, 2018	\$ 496,503,424
6. Actuarial value of assets gain/(loss) (5) - (4e)	\$ 14,135,334
7. Net actuarial gain/(loss) (3) + (6)	\$ 19,414,134

TABLE 9

ACTUARIAL GAIN/(LOSS) BY SOURCE

The purpose of conducting an actuarial valuation of a retirement plan is to estimate the costs and liabilities for the benefits expected to be paid from the plan, to determine the annual level of contribution for the current plan year that should be made to support these benefits and, finally, to analyze the plan’s experience. The costs and liabilities of this retirement plan depend not only upon the benefit formula and plan provisions but also upon factors such as the investment return on the Fund, mortality rates among active and retired members, withdrawal and retirement rates among active members, rates at which salaries increase and the rate at which the cost of living increases.

The actuarial assumptions employed as to these and other contingencies in the current valuation are set forth in Appendix C of this report.

Since the overall results of the valuation will reflect the choice of assumptions made, periodic studies of the various components of the plan’s experience are conducted in which the experience for each component is analyzed in relation to the assumption used for that component (called an experience study). This summary is not intended to be an actual “experience study” but rather an analysis of sources of gain and loss in the past plan year.

**Gain/(Loss) By Source**

The System experienced a net actuarial gain on liabilities of \$5,279,000 during the plan year ended June 30, 2018, and an actuarial gain on assets of \$14,135,000. The net actuarial gain was \$19,414,000. The major components of this net actuarial experience loss are shown below:

<b>Liability Sources</b>	<b><u>Gain/(Loss)</u></b>
Salary Increases	\$ 3,979,000
Retirements	(1,270,000)
Terminations	(278,000)
Disabilities	287,000
Deaths	(1,490,000)
New Entrants/Rehires	(333,000)
Cost of Living Adjustment	4,624,000
Miscellaneous	(240,000)
<b>Total Liability Gain/(Loss)</b>	<b>\$ 5,279,000</b>
<b>Asset Gain/(Loss)</b>	<b>\$ 14,135,000</b>
<b>Net Actuarial Gain/(Loss)</b>	<b>\$ 19,414,000</b>

## SECTION 4– EMPLOYER CONTRIBUTIONS

---

The previous two sections were devoted to a discussion of the assets and liabilities of the System. A comparison of Tables 4 and 6 indicates that current assets fall short of meeting the present value of future benefits (total liability). This is expected in all but a fully closed down fund, where no further contributions are anticipated.

In an active system, there will almost always be a difference between the actuarial value of assets and total liabilities. This deficiency has to be made up by future contributions and investment returns. An actuarial valuation sets out a schedule of future contributions that will deal with this deficiency in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. Under an actuarial cost method, the contributions required to meet the difference between current assets and current liabilities are allocated each year between two elements: (1) the normal cost, (2) administrative expenses and (3) the payment on the unfunded actuarial accrued liability.

The term “fully funded” is often applied to a system in which contributions at the normal cost rate are sufficient to pay for the benefits of existing employees as well as for those of new employees. More often than not, systems are not fully funded, either because of past benefit improvements that have not been completely funded and/or because of actuarial deficiencies that have occurred because experience has not been as favorable as anticipated. Under these circumstances, an unfunded actuarial accrued liability (UAAL) exists.

### **Description of Rate Components**

Effective with the July 1, 2008 valuation, the actuarial cost method used by the System changed from Aggregate to the traditional Entry Age Normal (EAN) – level percent of pay cost method. Under the EAN cost method, the actuarial present value of each member’s projected benefit is allocated on a level basis over the member’s compensation between the entry age of the member and the assumed exit ages. The portion of the actuarial present value allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to prior years of service is called the actuarial accrued liability. The unfunded actuarial accrued liability represents the difference between the actuarial accrued liability and the actuarial value of assets as of the valuation date. The unfunded actuarial accrued liability is calculated each year and reflects experience gains/losses.

The Board has elected to amortize the legacy unfunded actuarial accrued liability as of July 1, 2017, as a level-percent of payroll, over a closed 30-year period beginning July 1, 2008. New layers of unfunded actuarial accrued liability will be created on each actuarial valuation date and will be amortized, as a level-percent of payroll, over a closed 20-year period. Changes in the unfunded actuarial accrued liability that are created by a change in assumptions or changes in benefit structure will be amortized over a reasonable time period as selected by the Board after consultation with their actuary.

### **Contribution Rate Summary**

## **SECTION 4– EMPLOYER CONTRIBUTIONS**

---

The normal cost rate is developed in Table 11. Table 12 develops the contribution rate for amortization of the unfunded actuarial accrued liability. Table 13 develops the total actuarial contribution rate.

**APPENDIX B**

**SUMMARY OF PLAN PROVISIONS**

## APPENDIX B – SUMMARY OF PLAN PROVISIONS

---

Chapter 97A of the Iowa code sets out the benefit provisions of the Iowa Peace Officers' Retirement, Accident and Disability System, which are briefly summarized as follows:

### **Retirement Benefit**

#### ***Eligibility***

Age 55 with 22 years of service.

#### ***Average Final Compensation***

Average of the member's regular compensation, including longevity and per diem, during the high three (3) years of service.

#### ***Monthly Annuity***

The sum of (1) and (2):

- (1)
  - a. For retirement prior to July 1, 1990, 50% of average final compensation at retirement. Average final compensation equals average of highest three years of compensation.
  - b. For retirement after June 30, 1990 and before July 1, 1992, 54% of average final compensation at retirement.
  - c. For retirement after June 30, 1992 and before July 1, 1993, 56% of average final compensation at retirement.
  - d. For retirement after June 30, 1993 and before July 1, 1994, 58% of average final compensation at retirement.
  - e. For retirement after June 30, 1994, and before July 1, 2000, 60% of average final compensation at retirement.
  - f. For retirement after July 1, 2000, 60.5% of average final compensation at retirement.
- (2) For members who do not withdraw member contributions:
  - a. For retirement after June 30, 1990 and before July 1, 1991, 0.3% of average final compensation for each year of service over 22 years (up to 8 years). Service after age 55 is excluded.
  - b. For retirement after June 30, 1991 and before October 16, 1992, 0.6% of average final compensation for each year of service over 22 years (up to 8 years). Service after age 55 is excluded.

## APPENDIX B – SUMMARY OF PLAN PROVISIONS

---

- c. For retirement after October 15, 1992 and before July 1, 1996, 0.6% of average final compensation for each year of service over 22 years (up to 8 years).
- d. For retirement after June 30, 1996, 1.5% of average final compensation for each year of service over 22 years (up to 8 years).
- e. For retirement after June 30, 1998, 1.5% of average final compensation for each year of service over 22 years (up to 10 years).
- f. For retirement after June 30, 2000, 2.75% of average final compensation for each year of service over 22 years (up to 10 years).

### **Early Retirement Benefit**

#### *Eligibility*

Effective July 1, 1996, age 50 (but not age 55) with 22 years of service.

#### *Monthly Annuity*

The benefit provided as a retirement benefit actuarially reduced for commencement prior to age 55.

### **Deferred Vested Benefit**

#### *Eligibility*

Four years of service.

#### *Monthly Annuity*

At age 55. The benefit provided as a retirement benefit at termination times a service ratio. The service ratio equals service at termination divided by 22 (not greater than 1.0).

### **Ordinary Disability Benefit**

#### *Eligibility*

None.

#### *Benefit*

- (1) If service at disability is greater than or equal to 5 years, the greater of 50% of average final compensation at disability or the benefit amount calculated under a service retirement.
- (2) If service at disability is less than 5 years, 25% of average final compensation at disability.

## **APPENDIX B – SUMMARY OF PLAN PROVISIONS**

---

### **Accidental Disability Benefit**

***Eligibility***

None.

***Benefit***

- (1) For retirement prior to July 1, 1990, 66-2/3% of average final compensation at disability.
- (2) For retirement after June 30, 1990, but before July 1, 1998, 60% of average final compensation at disability. If the service amount at disability is greater than or equal to 22 years, the greater of 60% of average final compensation at disability or the benefit amount calculated under a service retirement.
- (3) For retirement after July 1, 1998, the greater of 60% of average final compensation at disability or the benefit amount calculated under a service retirement.

### **Ordinary Death Benefit**

***Eligibility***

For member in service: None.

For member not in service: Four years of service.

***Benefit***

- (1) A lump sum equal to 50% of compensation during the last year of employment, or
- (2) A pension based on 40% of average final compensation but not less than 25% of compensation paid to an active member having the rank of senior patrol officer of the state patrol. For members not in service, benefit is multiplied by the ratio of service at termination to 22 years (not greater than 1.0).
- (3) Additional benefit for members in service of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol for each child.

## **APPENDIX B – SUMMARY OF PLAN PROVISIONS**

---

- Payment Date***
- (1) For members in service: Immediately upon death of member.
  - (2) For member not in service: Payable when member would have been age 55. If there are children of the member, payable commencing at the member's death until children reach age 18 or 22. Pension resumes when member would have been age 55.

### **Accidental Death Benefit**

***Eligibility*** In actual performance of duty.

- Benefit***
- (1) 50% of average final compensation payable to surviving spouse, children or dependent parents.
  - (2) If there is not surviving spouse, children or dependent parents, or if accidental death occurs while not in the actual performance of duty, an Ordinary Death Benefit is payable.
  - (3) Additional benefit for members in service of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol, for each child.
  - (4) If the death meets specified criteria, a lump sum of \$100,000 payable to surviving spouse, children, dependent parents, or estate.

### **Death After Retirement**

- Benefit***
- (1) 50% of retirement allowance of retired member but not less than 25% of compensation paid to an active member having the rank of senior patrol officer of the state patrol.
  - (2) Additional benefit of 6% of compensation payable to an active member having the rank of senior patrol officer of the state patrol, for each child.

### **Adjustments to Pensions**

Each July 1 and January 1, if applicable, the following adjustments are made: Monthly earnable compensation payable to an active member, of the same rank and position in the salary scale as was held by the retired or deceased member at the time of the member's retirement or death, for July of the current year less that of the preceding July, times the following percentages:

**APPENDIX B – SUMMARY OF PLAN PROVISIONS**

---

- (1) 40% for members receiving a service retirement allowance and for beneficiaries receiving an accidental death benefit.
- (2) 40% for members with five or more years of membership who are receiving an ordinary disability benefit.
- (3) 40% for member receiving an accidental disability benefit.
- (4) 24% for members with less than five years of membership who are receiving an ordinary disability benefit and for beneficiaries receiving an ordinary death benefit.
- (5) 50% of the amount which would have been added to the benefit of the retired member, for surviving spouses, but not less than 25% of the monthly earnable compensation paid to an active member having the rank of senior patrol officer.

Additionally, the following amounts will be added to a member or beneficiary monthly pension as follows:

<u>Years Since Retired*</u>	<u>Amount</u>
0-4	\$15
5-9	20
10-14	25
15-19	30
20 or more	35

\*Measured in whole years.

There was a change in the way the flat escalator was applied effective July 1, 2010. Prior to 2010, the amount increased for each year after retirement.

Surviving children’s pensions are adjusted each July to equal 6% of monthly earnable compensation payable to an active member having the rank of senior patrol officer of the state patrol.

No pension adjustments are granted to members who retired with less than 22 years of membership.

**APPENDIX B – SUMMARY OF PLAN PROVISIONS**

---

**State Contributions**

For FY 2018 and thereafter, the State will contribute the lesser of 37% of payroll or the normal contribution rate, as defined in Chapter 97 A.8. Prior to FY 2018, the State had been making scheduled increases to its contribution rate of 2% of pay per year for ten years. The State also provides for a supplemental appropriation of \$5 million per year beginning July 1, 2013 (originally July 1, 2012 but extended by the 2012 legislature) and ending June 30 of the fiscal year during which the System’s funded ratio is at least 85%. For FY 2017, the supplemental contribution was reduced to \$2.5 million, but it returned to \$5.0 million for FY 2018 and thereafter.

**Member Contributions**

The following percentage of earnable compensation will be paid as member contributions:

<u>Period</u>	<u>Member Contribution Rate</u>
January 1, 1995 - June 30, 1995	8.35%
July 1, 1995 – June 30, 2011	9.35%
July 1, 2011 – June 30, 2012	9.85%
July 1, 2012 – June 30, 2013	10.35%
July 1, 2013 – June 30, 2014	10.85%
July 1, 2014 forward	11.40%

**Withdrawal of Member  
Contributions**

Effective July 1, 1990, members who terminate service, other than by death or disability, can elect to withdraw their accumulated contributions with interest in lieu of any benefits to which the member may be entitled from the System.

**Transfers With Statewide Fire  
and Police Retirement System**

Beginning July 1, 1996, vested members of an eligible retirement system who terminate employment and, within one year, commences covered employment under another eligible retirement system, may elect to transfer the average accrued benefit or the refund liability earned from the former system to the current system. Once such transfer is completed, service under the former system shall be treated as membership service under the current system.

**APPENDIX C**

**ACTUARIAL ASSUMPTIONS AND METHODS**

## APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

---

### Actuarial Cost Method

Liabilities and contributions shown in this report are computed using the Individual Entry Age method of funding.

Sometimes called "funding method," this is a particular technique used by actuaries for establishing the amount of the annual actuarial cost of pension System benefits, or normal cost, and the related unfunded actuarial accrued liability. Ordinarily the annual contribution to the System is comprised of (1) the normal cost and (2) an amortization payment on the unfunded actuarial accrued liability.

Under the Entry Age Actuarial Cost Method, the **Normal Cost** is computed as the level percentage of pay which, if paid from the earliest time each member would have been eligible to join the System if it then existed (thus, entry age) until his retirement or termination, would accumulate with interest at the rate assumed in the valuation to a fund sufficient to pay all benefits under the System.

The **Actuarial Accrued Liability** under this method at any point in time is the theoretical amount of the fund that would have accumulated had annual contributions equal to the normal cost been made in prior years (it does not represent the liability for benefits accrued to the valuation date). The **Unfunded Actuarial Accrued Liability (UAAL)** is the excess of the actuarial accrued liability over the actuarial value of System assets on the valuation date.

Under this method experience gains or losses, i.e. decreases or increases in accrued liabilities attributable to deviations in experience from the actuarial assumptions, adjust the unfunded actuarial accrued liability.

### UAAL Amortization Method

The Board has elected to amortize the legacy unfunded actuarial accrued liability as of July 1, 2017, as a level-percent of payroll, over a closed 30-year period beginning July 1, 2008. New layers of unfunded actuarial accrued liability will be created on each actuarial valuation date and will be amortized, as a level-percent of payroll, over a closed 20-year period. Changes in the unfunded actuarial accrued liability that are created by a change in assumptions or changes in benefit structure will be amortized over a reasonable time period as selected by the Board after consultation with their actuary.

### Asset Valuation Method

The System uses an asset valuation method to smooth the effects of market fluctuations. The actuarial value of assets spreads the difference between the actual return and the expected return (based on the actuarial assumption of 7.50%, effective July 1, 2017) evenly over five years.

## APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

---

### Actuarial Assumptions

**Investment Return:** 7.50% per year, net of investment expenses.

**Price Inflation:** 2.75% per year.

**Payroll Growth:** 3.00% per year, including price inflation.

#### Active Members:

1. Ordinary death rate RP-2014 Total Dataset Mortality Table with a one-year age set-back for males and Generational Projection, using MP-2016.

2. Accidental death rate 8.5 deaths per 10,000 exposed for one year.

3. Disability rates

<u>Age</u>	<u>Accidental Disability</u>	<u>Ordinary Disability</u>
22	0.06%	0.02%
27	0.14%	0.04%
32	0.22%	0.06%
37	0.30%	0.08%
42	0.38%	0.10%
47	0.48%	0.12%
52	0.62%	0.15%

4. Withdrawal rate

The following table is used:

<u>Service</u>	<u>Rate</u>
0-3	6.00%
4	4.75%
5	3.50%
6	2.25%
7-9	2.00%
10	1.50%
11	1.00%
12	0.80%
13	0.60%
14-19	0.40%
20	0.00%

**APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS**

---

5. Retirement age

<u>30 or More Years of Service</u>	
<u>Age</u>	<u>Probability of Retirement</u>
55-61	60%
62	100%

<u>Less than 30 Years of Service</u>	
<u>Age</u>	<u>Probability of Retirement</u>
55-61	33%
62	100%

Inactive vested members are assumed to begin receiving benefits at age 55.

6. Salary scale

<u>Year</u>	<u>Increase</u>
1	8.50%
5	7.00%
10	7.00%
15	4.50%
20+	4.00%

7. Post-retirement adjustments

Same as for retired members.

***Retired Members and Other Beneficiaries:***

- |                                       |   |
|---------------------------------------|---|
| 1. Mortality rate - Service retirees  | Service retirements and beneficiaries: RP-2014 Total Dataset Mortality Table with a one-year age set-back for males and Generational Projection, using MP-2016. |
| 2. Mortality rate - Disabled retirees | Disability retirements: RP-2014 Total Dataset Mortality Table with a four-year age set-forward for males and Generational Projection, using MP-2016.            |
| 3. Annual readjustment of pensions    | Wages for the same rank are assumed to increase 3.50%.  |

## APPENDIX C – ACTUARIAL ASSUMPTIONS AND METHODS

---

### *Dependency Ratios:*

1. Ordinary death benefit  
Alternate benefits payable to widow and minor children in 90% of cases.
2. Pension to spouse and children of deceased pensioned member  
In 90% of cases, with 1 child per member.

*Interest Credited to Member Contributions:* 4.00% per year.

*Marriage Assumption:* 90% married, with males 4 years older than females.

*Administrative Expenses:* Based on actual amount for the prior year increased with inflation.

**ADDENDUM**

---

**IOWA PEACE OFFICERS' RETIREMENT, ACCIDENT AND DISABILITY SYSTEM  
CERTIFICATION**

We have prepared an actuarial valuation of the Iowa Peace Officers' Retirement, Accident and Disability System as of July 1, 2018, for the fiscal year ending June 30, 2019. The results of the valuation are set forth in this addendum, which reflects the benefit provisions in effect on July 1, 2018.

In preparing this report, we relied, without audit, on information (some oral and some in writing) supplied by the System's staff. This information includes, but is not limited to, statutory provisions, employee data, and financial information. In our examination of these data, we have found them to be reasonably consistent and comparable with data used for other purposes. Since the valuation results are dependent on the integrity of the data supplied, the results can be expected to differ if the underlying data is incomplete, or missing. It should be noted that if any data or other information is inaccurate or incomplete, our calculations may need to be revised.

The results in this Addendum have been prepared for the sole purpose of providing the information required under Chapter 97 D.5 of the Iowa code. Calculations are based on the following prescribed methods:

- Actuarial cost method: Entry Age Normal
- Amortization method: Level-percent of payroll
- Amortization period: 30 years, open period

All other assumptions, methodologies, and System provisions used are consistent with those used in the regular July 1, 2018 valuation for the Iowa Peace Officers' Retirement, Accident and Disability System.

The results shown in this Addendum may not be consistent with those in the regular July 1, 2018 valuation. The July 1, 2018 valuation results were determined in accordance with generally accepted actuarial principles and practices that are consistent with the Actuarial Standards of Practice promulgated by the Actuarial Standards Board and the applicable Guides to Professional Conduct, amplifying opinion and supporting recommendations of the American Academy of Actuaries. The results shown in this Addendum are not necessarily based on the methodologies adopted by the System.

We are available to answer any questions on the material contained in this report, or to provide explanations or further details as may be appropriate.

The undersigned credentialed actuaries meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained in this report.

**ADDENDUM**

**IOWA PEACE OFFICERS’ RETIREMENT, ACCIDENT AND DISABILITY SYSTEM  
SUMMARY OF VALUATION RESULTS UNDER PRESCRIBED METHODOLOGY**

This addendum report has been prepared to present the results of a valuation of the Iowa Peace Officers’ Retirement, Accident and Disability System as of July 1, 2018, based on the prescribed methodology under current statutes and regulations issued thereunder.

The unfunded actuarial accrued liability has been amortized as a level-percent of payroll over 30 years. The payroll growth assumption used was 3.00%.

A summary of principal valuation results from the current and the prior valuation follows.

	<b>Actuarial Valuation as of</b>	
	<b>July 1, 2018</b>	<b>July 1, 2017</b>
<b>Summary of Costs</b>		
Normal cost	26.49%	26.51%
Administrative Expenses	0.53%	0.54%
UAAL amortization	<u>21.48%</u>	<u>24.51%</u>
Total	48.50%	51.56%
Less Employee Contribution Rate	<u>(11.40%)</u>	<u>(11.40%)</u>
State Required Contribution	37.10%	40.16%
<b>Funded Status</b>		
Actuarial accrued liability	\$658,487,243	\$636,058,890
Actuarial value of assets	496,503,424	453,128,907
Unfunded actuarial accrued liability	\$161,983,819	\$182,929,983
Funded Ratio	75.40%	71.24%
<b>Asset Values</b>		
Market value of assets (MVA)	\$528,781,898	\$468,300,420
Actuarial value of assets (AVA)	496,503,424	453,128,907
MVA/AVA	106.50%	103.35%
